Warning :
This device is to be installed only by a professional electrician fitter according to local applicable installation standards.

Product Description and working principles

This detector allows remote control of one or more receivers for a given time when a movement is detected in its detection zone. This product can be used in two types of configuration: one detector controls one/several receiver(s); several transmitters control the receiver(s).

Operation

The receiver(s) is(are) under control as soon as the brightness level as set by potentiometer ② is considered too low and a movement is detected. Upon detection, the time delay is restarted.

If LED A flashes quickly during configuration, the position of potentiometer ① is not compatible with the selected function.

If LED B flashes quickly or nothing occurs when starting configuration, check that the batteries are correctly installed and replace them if necessary. Product factory reset is recommended before any new configuration.

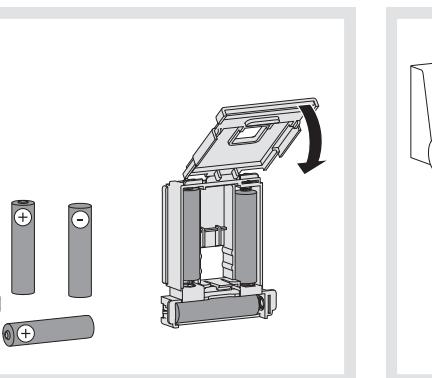

Factory return

Keep push-button cfg depressed until LED cfg (flashes >10s), and then release it. LED cfg is turned off when factory return is completed.

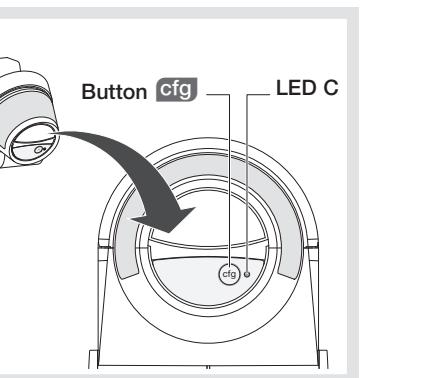

This operation causes full delete of product configuration in any configuration mode. After factory return, wait 15s before starting.

! Product factory return is required to change the configuration mode.

Installing batteries

cfg Button

Kit Description TRE700 / 720

The detector and the receiver must be preset in order to operate together.

These two products are pre-configured to operate together. Only delay, brightness level and detection zones are to be set by user.

(Please refer to Detector User's Instructions). Other devices can be added to the kit.

- (Red/Green LED) or timer (Red flashing LED) according to the case
- Delete (LED is OFF)
- The receiver will offer only the function set by the potentiometer.

Various configuration options are available When a detector is associated with a receiver, only 2 functions are available, depending on potentiometer's position:

Setting detector's delay		Setting receiver's delay
	Kit TRE700	Pre-configured (ON/OFF switch function)
	1 detector TRE5.. + 1 receiver	<p>Recommended configuration:</p> <ol style="list-style-type: none"> Set the potentiometer to a value different from <input checked="" type="checkbox"/> Configure ON/OFF switch function (See the Configuration Instructions)
	Kit TRE700 + 1 or several other receivers	<p>In order to have the same delay on each receiver:</p> <ol style="list-style-type: none"> Set the potentiometer to a value different from <input checked="" type="checkbox"/> Configure the ON/OFF switch function (See the Configuration Instructions) on other receivers
	1 detector TRE5.. + several receivers	<p>1. Set the potentiometer to a value different from <input checked="" type="checkbox"/></p> <p>2. Configure the ON/OFF switch function (See the Configuration Instructions) on each receiver</p>
	Several detectors TRE700-TRE5...	<p>Not recommended (conflict of delays)</p> <ol style="list-style-type: none"> Clear the previous pre-configured function if Kit TRE700 is used (See the Configuration Instructions) Set the potentiometer to position <input checked="" type="checkbox"/> on both detectors. Configure the "timer" <input checked="" type="checkbox"/> function (See the Configuration Instructions) on each receiver
	Kit TRE700/720 or 1 detector TRE5.. + 1 or several transmitters other than detectors + 1 or several receivers	<p>Timer function being not used on the other transmitter(s):</p> <ol style="list-style-type: none"> Set the potentiometer to a value different from <input checked="" type="checkbox"/> Configure the other transmitter(s) (See the Configuration Instructions) with a function other than timer
		Timer function used on the other transmitters:
		<ol style="list-style-type: none"> Clear the previous pre-configured function if Kit TRE700 is used (See the Configuration Instructions) Set the potentiometer to position <input checked="" type="checkbox"/> Configure the "timer" <input checked="" type="checkbox"/> function (See the Configuration Instructions) on each receiver for each transmitter involved

Note: During configuration of a detector, Step 2 of the Configuration Instructions shall be ignored.

Action	Adjustments	Potentiometer
Use Auto (factory) settings to set automatic lighting turn-on for a given time. Only available when a detector's time delay is set.	Auto Settings Put the Lux potentiometer on "auto test". The settings are predefined: Lux = (operating at night only) time = 3 min, sensitivity = max	auto test
Turn automatic lighting on for a given time. Only available when a detector's time delay is set.	Installer settings	30 s <input checked="" type="checkbox"/> 5 min lux auto test
Test and confirm detection zone.	Test mode Move the potentiometer ② to "auto test".	auto test auto test
Adjust sensitivity.	Allows setting the range to avoid disturbance.	- . +

Usable in all Europe and in Switzerland

Hereby, hager Controls, declares that this motion detector output is in compliance with the essential requirements and other relevant provisions of Directive 1999/5/EC.
The CE declaration can be consulted on the site: www.hagergroup.net

TROUBLESHOOTING...

PROBLEM	CAUSES	SOLUTIONS
Unwanted lamp switch on.	- Permanent heat source is active in the detection area (trees, bushes, etc.) - The detector is located on top a ventilation grill.	- Limit detector's range by adjusting its inclination or by fitting shuttering blades to the lens, or by lowering sensitivity using the adjustment knob. - Move the detector to another location.
The range of the detector is too narrow.	- Detector's installation height is not suitable (too high or too low). - Sloppy ground.	- Modify installation height (2.5m is optimal). - Adjust detector's direction.
Moving vehicle or person is not detected.	- Vehicle's motor is not enough yet (heat radiation is too weak). - People move forwards in front of detector. - Detector energy too low.	- Install the detector in such a way that objects move within the area in transverse direction. - Replace power cells. - Place detector in a suitable location with solar cell directed towards the sun.

Technical specifications

Electrical specifications

Power Supply:

- TRE50.., TRE52..: 3 x 1,5V AAA

Operational characteristics

Dimensions (L x w x h): 153 x 91 x 130 mm

Luminosity threshold: 5 → 1000 Lux

Fixed time : 30 s → 15 min

Sensitivity: min. 20%, max. 100%

Limiting the detection zone : Adjustable shutters supplied

Transmission frequency: 868,3 MHz

Transmitter duty cycle : 1%

Receiver category: II

Range: 100 m on open field / avomessa tilassa

Fixing accessories: corner support (sold separately) EE855/52125, EE856/52126

Environment

Operating temperature : -20 °C → +55 °C

Storage temperature : -20 °C → +60 °C

IK:04

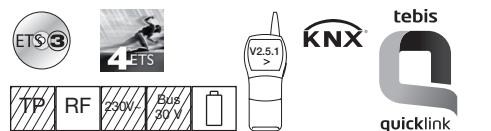

Protection class: IP55

Resistance to fire : 750°C

Standards : EN 60950-1 ; EN 301489-3 ; EN 300220-2 ; EN 50491-3

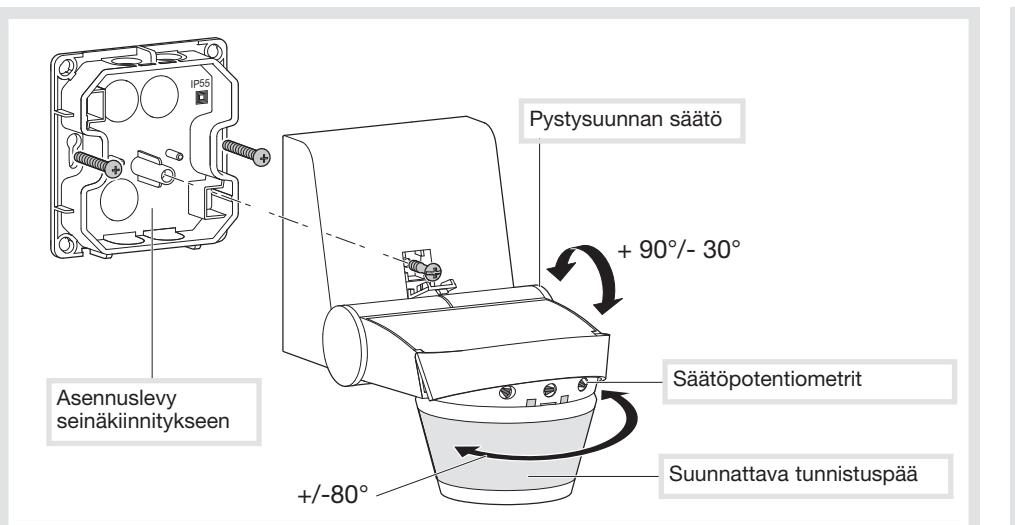

Liketunnistin lisätoiminnolla 220°

Varoitus:
Tämä laite tulee olla sähköalan ammattiinhenkilön asentama voimassa olevien sähköturvaliusuusmäärysten mukaisesti.

Tuote-esittely ja toimintaperiaatteet

Tämä tunnistin mahdollistaa yhden tai useamman vastaanottimen etäohjauskuksen asetuksen ajan, kun liikettä tunnistetaan tunnistusalueella. Tätä tuotetta voidaan käyttää kahdentyyppisissä kokoapanoissa: yksi tunnistin ohjaa yhtä/seuraa vastaanottinta; useat lähetimet ohjaavat vastaanottimia.

Toiminta

Vastaanottimia ohjataan heti kun potentiometrillä ② asetettu valaistustaso alitetaan ja liikettä tunnistetaan. Tunnistetessaan liikettä viive nollataan kuormaan summattamatta.

Jos LED A vilkkuu nopeasti opetuksen aikana, potentiometri ① asento ei ole yhteensopiva valitun toiminnon kanssa.

Jos LED B vilkkuu nopeasti tai mitään ei tapahdu aloitettaessa opetusta, tarkista että paristot on asennettu oikein ja vähäne tarvittaessa.

Paristot on asennettu oikein ja vähäne tarvittaessa.

LED B V2.5.0 tai uudempi:

tuotefoiointojen kuvaus saatavilla valmistajalta.

• ETS3 tai TR131 kautta: tietokanta ja sovellusohje saatavissa valmistajalta.

Opetus tekoon:

Pidä painike cfg painettuna kunnes LED cfg vilkkuu (>10s), ja vapauta sen jälkeen. LED cfg sammutetaan kun palautus tehdasasetukseen on tehty.

Tämä toiminto poistaa kaikki eri ohjelmointitilojen asetelut tuotteelta. Tehdasasetusten palautukseen jälkeen, odota 15s ennen opetuksen aloitusta.

Opetus TX100:llä tai ETS:llä

Aseta tuote opetustilaan painamalla cfg-painiketta kerran TX100:n opetusvalaan aikana tai ryhmäsoitteluiden määritysten aikana TR131:n kanssa ETS:llä.

! Tuote tulee palauttaa tehdasasetukseen mikäli opetustapaa halutaan vaihtaa.

Palautus tehdasasetukseen

Pidä painike cfg painettuna kunnes LED cfg vilkkuu (>10s), ja vapauta sen jälkeen.

LED cfg sammutetaan kun palautus tehdasasetukseen on tehty.

Tämä toiminto poistaa kaikki eri ohjelmointitilojen asetelut tuotteelta.

Tehdasasetusten palautukseen jälkeen, odota 15s ennen opetuksen aloitusta.

Kulma-asennuksessa, seinäkiinnityslevy kinnitetään lisätävikeen ja tunnistimen välille.
