## HIGHLIGHTS

- Dims to a warm glow to mimic incandescent light behaviour. The more you dim, the warmer the light.
- Compatible with standard dimmable LED drivers – no special control system needed
- Flexible LED-tape for professional lighting applications with high density and light output
- Available in IP00 and IP68-version
- Best in class optical properties – MacAdam 3 / CRI>90
- An onboard IC ensures that the light gets a warmer colour temperature when dimmed
- High quality adhesive 3M-tape on backside for easy mounting on common surfaces
- Long lifetime: L70 = 50 000h ①
- Optimized for high resolution digital dimming 0.1-100% using Welight LED-driver W71XX-series.
- Possible to connect 10 meters in series ②

## Accessories

- Solder-free connectors and bridges (included)
- Aluminium profiles for linear and corner applications
- Wide variety of lenses and covers  
15°/30°/60°/120°/Asymmetric/Batwing
- Fixed or adjustable mounting brackets
- Optimised drivers to fit every need and application

## TECHNICAL DATA

### Packaging

Full carton	20 pcs
Weight per pc	IP00: 320 g   IP68: 700 g
Box dimensions	250 x 250 x 30 mm

### Electrical ①

Supply voltage (VDC)	24
DC Voltage Range ④⑤	22-26V @ L ≤5m 24-26V @ L ≤10m
Power (W) per m	15
Current (mA) per m	625
Supply Cable	L = 1 m (both ends) AWG20 UL standard BK (Black +) RD (Red -)

### Dimensional ②

Length (L)	5 m
Max length in series ⑥	10 m
Min Bending Radius	IP00: 30 mm IP68: 50 mm
Width (W)	IP00: 10 mm IP68: 12 mm   Incl. Endcap: 14 mm
Height	IP00: 1,4 mm IP68: 4,5 mm   Incl. Endcap: 6,5 mm
Cutting length (C)	83,3 mm
Pitch distance (P)	12 mm (between groups)

### Temperature and Lifetime

Performance Temp Rating (Tp)	65 °C
Operating Temp Range (Ta) ⑤	-35/+50 °C
Max PCB Temp (Tc)	75 °C
Storage Temp	-35/+80 °C
L70F10 @Tp	50 000 h
L90F10 @Tp	35 000 h
Adhesive	3M VHB 5-year warranty
Warranty Period @Tp	5 years

### Safety & Compliance

Constant Current IC	Yes, bipolar IC
Insulation Voltage	0,5kV DC 10mA 60sec
IEC Standards	IEC 62031 IEC 62471 IEC 62717 IEC 61000-4-2
ESD Class	1
Risk group (EN 62471:2008)	1
Classification acc. to IEC 62031	Class III

### Optical ①③

Luminous Flux (lm) per m	1500
Beam Angle	120
LED package	2835
LED quantity per m	168
Colour Temp @max dim-level	IP00: 2700K IP68: 3000K
Colour Temp @min dim-level	IP00: 2000K IP68: 2400K
MacAdam SDCM	≤3

### Photometric Code (according to EN 62717)

White Tone	CCT	Photometric Code
Candlelight	2000 K	920 / 349
Sunrise	2400 K	924 / 349
Incandescent	2700 K	927 / 349
Warm	3000 K	930 / 349

### Dimming Performance Summary ①③

IP00 Dim Level	CCT	LPM
100%	2700 K	1500
50%	2400 K	750
20%	2200 K	300
1%	2000 K	15

IP68 Dim Level	CCT	LPM
100%	3000 K	1500
50%	2700 K	750
20%	2500 K	300
1%	2400 K	15

① Tolerance range for electrical and optical data ±10%

② Tolerance range for dimensional data ±1%

③ All values for ta = 25 °C / tc = 65 °C

④ Measured at the beginning of the LEDtape. Exceeding the maximum operating voltage leads to an overload on the tape. This may result in a significant reduction in lifetime or even destruction of the tape.

⑤ Self-cooling at ta ≤ 35 °C

⑥ When connecting 10 meters in series, the supply voltage must be between 24-26V at the beginning of the tape. Lower voltage can cause a significant reduction in light output at the end of length.

Chromaticity coordinates and tolerances (according to CIE 1931)

The specified color coordinates are measured by a current impulse with nominal values of module after a settling time of 100 msec. The ambient temperature of the measurement is  $t_a = 25\text{ }^{\circ}\text{C}$ . The measurement tolerance of the color coordinates is  $\pm 0.01$ .

## WIRING

The LEDtape is delivered with colour coded connection cable at each end, L = 1 m, 2 x 0,5 mm<sup>2</sup> (AWG20).  
Do not connect more than 10 meters in series and make sure that the voltage is within the specified range at the beginning of the LEDtape.

## DIGITAL DIMMABLE DRIVERS

Welight offers a range of suitable LED-drivers especially designed for Dim2Warm applications.

	Control Signal	Art. Code	Driver Type	Max length per driver
1	DALI-2	W7101	LEDdriver LCV 100W 24V 1-4CH DALI SR	6.7 m
2	KNX	W7102	LEDdriver LCV 100W 24V 1-4CH KNX SR	6.7 m
3	DMX	W7103	LEDdriver LCV 100W 24V 1-4CH DMX SR	6.7 m

7	bDW / Casambi	28002678	LC 150W 24V bDW SC PRE2	10 m

① The driver can be controlled via DALI DT6, DSI, switchDIM, corridorFUNCTION and ready2mains.

## CABLE & CONNECTION ACCESSORIES

Pic	Type	Art. Code	Description	Included	Suitable for LEDtape	
					IP00	IP68
1	LEDtape Connector Strip-Strip	W8434	Connect IP00 strips to each other	1 pc	✓	✗
2	LEDtape Connector Strip-Cable	W8435	Connect IP00 strip to a 2-wire cable (cable not included). Max cross section AWG20 (0,5mm²).	1 pc	✓	✗
3	LEDtape Connector Slim Strip-Strip	W8436	Connect IP00 strips to each other inside a confined space, e.g. a mounting profile (cable not included)	1 pc	✓	✗
4	LEDtape Connector Slim Strip-Cable	W8437	Connect IP00 strip to a 2-wire cable inside a confined space, e.g. a mounting profile (cable not included). Max cross section AWG20 (0,5mm²).	1 pc	✓	✗
5	LEDtape Connector IP Strip-Strip	W8438	Connect IP68 strips to each other ⚠	1 pc	✗	✓
6	LEDtape Connector IP Strip-Cable	W8439	Connect IP68 strip to a cable (20cm cable included) ⚠	1 pc	✗	✓
7	LEDtape Connector Strip-Corner-Strip	W8451	Connect IP00 strips in a 90° angle. Suitable for corners.	–	✓	✗
8	LEDaccessory Plug Connector 2P IP20 36V 9A	W8412-D2	Pluggable Cable Joint. Can act as both female and male by turning it upside down. Max cross section AWG20 (0,5mm²).	–	✓	✗
9	LEDaccessory T Splicer 2P IP20 300V 10A	W8412-T2	T Splicer. Can be used to split the supply cable in two directions. Max cross section AWG20 (0,5mm²).	–	✓	✗
10	LEDaccessory Connector IP68 incl F+M	W8411-A2	IP68 connector with lockable female and male plug incl. 30cm cable, white	–	✗	✓
11	LEDcable RKUB 2X0.5 AWG20 Rd/Bk 6m	W8417	Black/red connection cable, 6m reel. Indoor use only.	–	✓	✓
12	LEDcable RKUB 2X0.5 AWG20 W/W 6m	W8418	White connection cable, 6m reel. Indoor use only.	–	✓	✓
11	LEDcable RKUB 2X0.5 AWG20 Rd/Bk 100m	W8421	Black/red connection cable, 100m reel. Indoor use only.	–	✓	✓
12	LEDcable RKUB 2X0.5 AWG20 W/W 100m	W8422	White connection cable, 100m reel. Indoor use only.	–	✓	✓
13	LEDcable RKKB 2X1 Rd/Bk Yd 5,8mm Bk 100m	W8413	Black/red connection cable with UV-resistant insulation, 100m reel. Suitable for outdoor use. ⚠ Not compatible with quick connectors!	–	✓	✓
14	LEDtape 3M VHB Adhesive 10mm 33m reel	W8449	Additional adhesive for repairing or replacing the adhesive on the back of LEDtape IP00 and IP68. Pre-cut to fit PCB width 10mm. Reel length 33m.	–	✓	✓
15	LEDtape IP Endcap	W8432	Suitable for sealing the end of a cut LEDtape IP68. Use with W8433.	5 pcs	✗	✓
16	LEDtape Silicon Tube with tip	W8433	Suitable for sealing the end of a cut LEDtape IP68. Can be used together with W8432 for optimal protection.	1 pc	✗	✓
17	LEDtape IP Assembly Kit 10	W8901	Endcaps, Mounting Brackets & Silicon	–	✗	✓
18	LEDtape Mounting Clip	W8430	Mounting clip with single screw for IP00-rated LEDtape	10 pcs	✓	✗
18	LEDtape Mounting Clip IP68	W8431	Mounting clip with single screw for IP68-rated LEDtape	10 pcs	✗	✓

⚠ When using the accessory properly the overall IP-rating of the solution will be IP67.

## PROFILE SYSTEMS & LENSES

Start by selecting an aluminium **profile (A)** and a suitable **lens cover (B)** and then add optional **accessories (C)**.

## LEDtape Indoor Series IP00

INSTRUKTIONER  
INSTRUCTIONS  
ANLEITUNG  
ISTRUZIONI  
INSTRUCCIONES

### INSTALLATION

1

Never bend the LEDtape at a radius smaller than 30 mm.

2

Assembly must not damage or destroy conducting paths on the PCB.

3

#### Perform the Pre-connection Checklist:

- ✓ Maximum length connected in series:  
→ Datasheet | Wiring
- ✓ Polarity and Cable Colour Coding:  
→ Datasheet | Wiring
- ✓ Maximum length per driver:  
→ Datasheet | Digital Dimmable Drivers

4

The fixing/cooling surface must be properly cleaned to remove grease, dirt and silicon before application, e.g. using Isopropyl alcohol.

5

Remove the adhesive tape from the backside and fix the LEDtape on the cleaned fixing/cooling surface.

6

When fixing the LEDtape to a surface, apply an even but gentle pressure and try to avoid applying pressure directly on the LED itself (the maximum allowed pressure is 20 N/cm<sup>2</sup>).

After assembly always check that the entire length has attached properly to the surface and that there is no air pockets underneath.

7

If the total length is longer than 2 meters it is recommended to use the included screw mounting clips in addition to the adhesive tape.

8

Always use our approved drivers and controls to power the LEDtape. If the wrong type of driver is used the product warranty is void.

→  Datasheet | Digital Dimmable Drivers

9

The temperature on the surface of the LEDtape (tc) may under no circumstances be higher than 65 °C if the expected lifetime of the LEDtape is to be met.

## CUT & SOLDER

The LEDtape is separable at the middle of every solder pad with the full function of each LED segment. It is only allowed to cut at the indicated cutting line.

Always cut the LEDtape in a straight line – 90° in relation to the PCB edges. Use Welight's official connection accessories to split, connect, and bridge the LEDtape.

If you need to solder the LEDtape, pre-tin the cables only. Soldering temperature max 300 °C for 4 seconds.

For details on how to solder an IP00 LEDtape, please watch this VIDEO TUTORIAL:

## LEDtape Indoor Series IP00

CONECTORES

### STRIP TO CABLE

1

Cut the LEDtape in the middle of the solder pads.

2

Peel off approx. 1 cm of the adhesive tape from the back of the PCB.

3

Open the cap as much as possible and insert the LEDtape all the way to the back of the connector.

4

Use a pair of flat pliers to press down on each side of the cap until they lock in position. A "CLICK" can be heard when the pins are locked.

5

Insert the cable all the way to the back of the connector. Make sure you **match the POLARITY** of the LEDtape before locking the connector in place.

6

Use a pair of flat pliers to press down on each side of the cap until they lock in position. A "CLICK" can be heard when the pins are locked.

## STRIP TO STRIP

1

Cut the LEDtape in the middle of the solder pads.

2

Peel off approx. 1 cm of the adhesive tape from the back of the PCB.

3

Open the cap as much as possible and insert the LED-strip all the way to the back of the connector.

4

Use a pair of flat pliers to press down on each side of the cap until they lock in position. A "CLICK" can be heard when the pins are locked.

5

Repeat steps 1-4 for the other connecting end of the LEDtape. Make sure you check that both ends are facing the **SAME POLARITY** before locking the last connector in place.

If you are in doubt, consider soldering your connection instead. There is no substitute for a permanent soldered connection.

VIDEO TUTORIAL:

### Do NOT use Quick Connectors when...

- × You need to connect a pre-soldered joint.

- × Your LED strips might be subjected to movement - as in installations on cars, boats, or other vehicles; or in installations that might be installed or set up several times, such as portable shelving or displays.

- × You have a large number of connections to make - particularly in installations that require many connections back to back, where one failure would result in the loss of large sections of light.
- × You are installing in tight places - when the added size of the connector would make your LED strip installation difficult or impossible.
- × Your connectors absolutely **MUST NOT** fail - as in connectors installed in hard to reach places, in products or installations you're delivering or shipping to a customer.

### STRIP TO CABLE

1

Cut the LEDtape in the middle of the solder pads.

2

Peel off approx. 1 cm of the adhesive tape from the back of the PCB.

3

Insert the LEDtape and cable all the way to the back of the connector. Make sure you **match the POLARITY** of the LEDtape with the cable.

4

Push firmly on the top of the connector until it locks in place. Use a pair of flat pliers if needed.

5

When pressed in place the top should be level with the rest of the connector to ensure a proper connection.

## STRIP TO STRIP

1

Cut the LEDtape in the middle of the solder pads.

2

Peel off approx. 1 cm of the adhesive tape from the back of the PCB on both ends that you want to connect.

3

Insert the ends of the LEDtape all the way to the back of the connector. Make sure you **match the POLARITY** on both sides.

4

Push firmly on the top of the connector until it locks in place. Use a pair of flat pliers if needed.

5

When pressed in place the top should be level with the rest of the connector to ensure a proper connection.

If you are in doubt, consider soldering your connection instead. There is no substitute for a permanent soldered connection.

VIDEO TUTORIAL:

### Do **NOT** use Quick Connectors when...

- × You need to connect a pre-soldered joint.

- × Your LED strips might be subjected to movement - as in installations on cars, boats, or other vehicles; or in installations that might be installed or set up several times, such as portable shelving or displays.

- × You have a large number of connections to make - particularly in installations that require many connections back to back, where one failure would result in the loss of large sections of light.

## LEDtape Outdoor Series IP68

INSTRUKTIONER  
INSTRUCTIONS  
ANLEITUNG  
ISTRUZIONI  
INSTRUCCIONES

### INSTALLATION

1

Never bend the LEDtape at a radius smaller than 50 mm.

2

Assembly must not damage or destroy conducting paths on the PCB.

3

#### Perform the Pre-connection Checklist:

- ✓ Maximum length connected in series:  
→ Datasheet | Wiring
- ✓ Polarity and Cable Colour Coding:  
→ Datasheet | Wiring
- ✓ Maximum length per driver:  
→ Datasheet | Digital Dimmable Drivers

4

The fixing/cooling surface must be properly cleaned to remove grease, dirt and silicon before application, e.g. using Isopropyl alcohol.

5

Remove the adhesive tape from the backside and fix the LEDtape on the cleaned fixing/cooling surface.

6

When fixing the LEDtape to a surface, apply an even but gentle pressure and try to avoid applying pressure directly on the LED itself (the maximum allowed pressure is 20 N/cm<sup>2</sup>).

After assembly always check that the entire length has attached properly to the surface and that there is no air pockets underneath.

7

If the total length is longer than 2 meters or when used in environments with large variations in temperature (e.g. outdoor applications) it is recommended to use the included screw mounting clips in addition to the adhesive tape.

8

Before you connect the power supply, make sure all cable connections have been properly sealed using weatherproof connectors, e.g. 3M Scotchlok (not included). Always use our approved drivers and controls to power the LEDtape. If the wrong type of driver is used the product warranty is void.

→  Datasheet | Digital Dimmable Drivers

9

The temperature on the surface of the LEDtape ( $T_c$ ) may under no circumstances be higher than 65 °C if the expected lifetime of the LEDtape is to be met.

## CUT & RE-SEAL

7

Thread the connection cable through the hole of the end cap.

8

Dispense a small portion of silicon inside the end cap and then slide it into place over the end of the LEDtape. Please wait 60 minutes for the silicone to solidify.

CUT IP68 = IP67

Do not place the re-sealed parts permanently under water! When cut and re-sealed properly the overall protection of the LEDtape will be reduced from IP68 to IP67.

## SOLDERING

If you need to solder the LEDtape, pre-tin the cables only. Soldering temperature max 300 °C for 4 seconds.

For details on how to solder an IP68 LEDtape, please watch this VIDEO TUTORIAL:

## LEDtape Outdoor Series IP68

CONNECTORS  
VERBINDER  
CONNETTORI  
CONECTORES

### STRIP TO CABLE

1

Cut the LEDtape in the middle of the solder pads.

2

Peel off approx. 1 cm of the adhesive tape from the back of the LEDtape.

3

Position the connector sleeve to match the LEDtape with the hole facing upwards.

4

Use the included Silicon Tube to dispense silicon around the end of the LEDtape to facilitate the insertion into the connector sleeve.

5

Push the lubricated end of the LEDtape all the way into the sleeve.

6

Put the cable connector on top of the sleeve and push downwards. Make sure you **match the POLARITY** of the LEDtape with the connector before locking the connector in place.

Use a pair of flat pliers to press down on each side of the cap until they lock in position. A "CLICK" can be heard when the pins are locked.

### LEDtape IP68 + Connectors = IP67

Do not use connectors permanently under water! When using connectors, the overall protection of the LEDtape will be reduced from IP68 to IP67.

## STRIP TO STRIP

1

Cut the LEDtape in the middle of the solder pads.

2

Peel off approx. 1 cm of the adhesive tape from the back of the LEDtape.

3

Position the connector sleeves to match both ends of the LEDtape with the holes facing upwards.

4

Use the included Silicon Tube to dispense silicon around the ends of the LEDtape to facilitate the insertion into the connector sleeves.

Push the lubricated ends of the LEDtape all the way into the sleeves.

Put the bridge connector on top of the sleeves and push downwards. Make sure you **match the POLARITY** of the LEDtape with the connector before locking the bridge connector in place.

Use a pair of flat pliers to press down on each side of the cap until they lock in position. A "CLICK" can be heard when the pins are locked.

**LEDtape IP68 + Connectors = IP67**

Do not use connectors permanently under water! When using connectors, the overall protection of the LEDtape will be reduced from IP68 to IP67.

**Do NOT use Quick Connectors when...**

- × You need to connect a pre-soldered joint.

- × Your LED strips might be subjected to movement - as in installations on cars, boats, or other vehicles; or in installations that might be installed or set up several times, such as portable shelving or displays.

- × You have a large number of connections to make - particularly in installations that require many connections back to back, where one failure would result in the loss of large sections of light.
- × You are installing in tight places - when the added size of the connector would make your LED strip installation difficult or impossible.
- × Your connectors absolutely **MUST NOT** fail - as in connectors installed in hard to reach places, in products or installations you're delivering or shipping to a customer.

If you are in doubt, consider soldering your connection instead. There is no substitute for a permanent soldered connection.
