Select the type of luminaire according to the application area. See protection class and other markings under each product.

The luminaires above are not recommended in corrosive environments. Examples of corrosive environments are cattle stalls, pig stalls, poultry stalls, car washes, lubrication pits, public bath or the like. In these environments, both luminaires and fasteners must be able to withstand corrosion.

Plastic luminaires must be intended for the environment in questions, and the plastic may need to withstand detergents and corrosive gases such as ammonia.

At Hide-a-lite, we would be pleased to help you with your lighting calculation. Get in touch and we'll tell you more!
