Exiway Light

Born to satisfy all the application. Improved advantages from traditional solutions up to wireless remote monitoring

Configurable
light level

Antipanic
or Exit sign

Easy integration
into the environment

Wireless
connection

Exiway Light all versions

Standard

Luminaires operating in emergency mode.
Manual Verification of the functionalities.

FUNCTIONS

Emergency

Activa

Self-testing luminaires: technology makes it possible to carry out periodic and automatic tests of the single luminaire signaling any anomalies via a multicolored LED. Reduction of verification times thanks to the automatic tests.

FUNCTIONS

Emergency

Self - test

Activa-link

Not only periodic and automatic tests of the single luminaire but also remotely monitoring of the status through the Facility Expert Small Business APP. Real-time notifications in case of failures and digital report downloadable from everywhere at any time.

FUNCTIONS

Emergency

Self - test

Remote Monitoring and digital reporting

Monitor from everywhere your Emergency Lighting system

Exiway Light Activa-link integrated in Facility Expert SB

Luminaires communicate with each other in radio frequency creating a mesh network. Each Exiway Light Activa-link works as a repeater ensuring robust propagation of the signal.

The APP Facility Expert Small Business allows to:

- receive notifications in real time
- download the report of your emergency lighting system

Maximum efficiency and time savings

Exiway Light Activa-link

The status of the Activa-link luminaires is always available remotely through the Facility Expert SB APP. You also receive notifications in real time.

Facility Expert SB

Real time notifications on the APP in case of failure

Digital report downloadable in any moment from everywhere

E-mail with details of failures

Protect your safety with timely repairs and preventative management

Your professional support for monitoring the system in compliance with the law

The electrician is your partner for monitoring the system remotely

Owner

Thanks to the APP, your trusted electrician is delegated by you to manage and monitor the emergency lighting system.

Digital report

The trusted electrician is always updated on the status of the system by e-mail with:

- digital report of the system
- detail of the failures of each luminaire

Electrician

The operation on the system is reduced to minimum. Information in real time allow the electrician to go in site only when needed.

Regulations

The report helps you to be compliant with the regulations. It keeps track of the tests done and can be attached to the safety log.

Choose your light level

1 reference 5 performances

Multi-performance range to choose the required function just before installing the product

Simple and versatile range. 3 models cover 15 different performances. Autonomy can be selected: standard autonomy is 1 hour, but can be increased to 1.5, 2 or 3 hours depending on the project specifications. Each reference includes maintained/non-maintained function, M/SA maintained mode (always ON), NM/SE non-maintained mode (only emergency), selection can be done from jumper.

2

Quick fix reflector
Thanks to dedicated frontal holes

Beautiful and secure

The best mechanical and aesthetic solution in the IP42 and IP65 versions

Guaranteed protection

IP65 version perfectly fits in outdoor installation, with dust presence, vapors or water jets maintaining the same aesthetic impact. **IK09** impact protection ratings for the entire range.

Designed to respect the environment

Sustainable and regulation compliance

High efficiency LEDs

No photobiological risk in accordance with EN 62471
Risk Group Zero

Eco-compatible materials

The packaging is fully recyclable and more than 40% of the plastic parts are made of recycled material

Battery LiFePO4

Increased energy efficiency,
lower and higher temperature tolerance.
Does not contain hazardous materials

New Green Premium layout, recycled carton environmentally friendly

Complies with
the European Regulations
and is ENEC Certified

EN 60598-2-22 / EN 62034
EN 62471

Green Premium products comply with RoHS and REACH standards. We greatly surpass regulatory requirements thanks to the gradual replacement of certain materials and substances used in our products.

Exiway Light

Technical Features

- Protection degree: IP42 and IP65
- Impact protection rating: IK09
- Entry cable or tubes in soft rubber (SEBS) up to 16 mm Ø
- Standard, Activa and Activa-link versions
- Activa-link compatible with PowerTag Link C+ (Ref. A9XELC10)
- Insulation Class II
- Compliant with EN 60598-2-22 EN 62471 Group RG0
- Installation even on flammable surface
- Working temperature 0° + 40°C
- Mains: 230 V 50 Hz
- Batteries LiFePO4
- Maintained (M/SA) and Non-Maintained (NM/SE) function available from jumper position
- Activa and Activa-link versions with maintained connector for remote switch (the jumper must remain in the Maintained position)
- Incandescent wire 850° C (60695-2-10)
- Self-extinguishing Polycarbonate 94 V-2 (UL94)
- Light source: Long life LED (up to 100,000 h)
- Multiple autonomies 1h, 1.5h, 2h and 3h selectable from a dedicated jumper
- Complete recharge 12 h
- Certification ENEC

Schneider Electric
Facility in Pieve di Cento - Italy

Welcome to the centre of excellence for Emergency Lighting

Emergency Lighting by Schneider Electric is digital, connected and Italian

Schneider Electric - Emergency Lighting has an Italian history which dates back to 2006 with the acquisition of OVA. Since then, the facility in Pieve di Cento (Italy) has focused on manufacturing with innovative solution. For example: in the mold departments there are new technologies such as bi-material injections and rotary table molding applications, moreover SMD automatic assembly lines improve the quality in the printed circuit department. Pieve di Cento facility is a world-renowned Center of Excellence, and the innovation proposed by the Group starts from here. Huge investments have been done to digitize the production plant, which currently applies the main Schneider Electric smart manufacturing solutions and a step ahead in the research and development. Schneider Electric digitization campaign integrates EL in the BMS (Building Management System) and, above all, in **EcoStruxure™**: the IoT enabled and open digitization platform which makes it possible to exploit all the advantages of IT and OT integration with connected products, supervising control systems, applications, analytics and services. Thanks to this, the production facility is also a “show room” of the company’s innovations for all visitors and internal employees.
