

## LV2565 Optimus St Closure S 24F 7mm

### Features

- Designed for direct buried, pole and wall mount or manhole applications
- Capacity for 24 single fiber splices
- Two oval inlets with 55,6mm x 40,9mm inner dimensions
- Dimensions                                      Length 375mm, closure Ø 114,3mm, flange Ø 154mm
- Material                                              Acid-proof stainless steel
- Tightness                                              IP 67

*Open Optimus St Closure S 24F 7mm.*

*Inner frame of the Optimus St Closure S 24F 7mm.*

*Cable seals can be installed close to the oval inlet.*

*Microducts in the joint closure can be sealed with the Nestor Mech Seals just like cables.*

*In this example, the incoming duct comes through one inlet and two outgoing ducts goes out from another.*

*It is recommended that all duct ends in the joint closure will be sealed with Nestor Optimus Cable Seals to prevent moisture, water and gas getting inside the microduct.*

*In this example, the incoming duct is sealed with Nestor Optimus Gas Block, as well as one outgoing duct. These two duct ends will be connected to the actual microduct route in the installation stage. Another outgoing duct is left unconnected and sealed with Nestor Optimus End Stop so the microduct network is easily expandable afterwards.*

*The Nestor Optimus product family includes also microduct accessories and tools.*

## Basic assembly

- Grounding clip for 16 mm<sup>2</sup> grounding wire
- Mounting and grounding bars for incoming cables
- Splice sleeves & sleeve holders for 24 fibers
- Supplies for fastening loose tubes on the splice tray
- Dehumidifier
- Sandpaper
- LV2543 Nestor Mech Seal 6 x 10mm 2 pcs
- LV2258 Optimus Gas Block 7 mm (0,5-3,5 mm) 12 pcs
- LV2525 Optimus Cable Seal 7 mm (0,5-3 mm) 12 pcs

*Optimus St Closure S 24F 7mm basic assembly.*

## Additional information about installation

- During the installation, the cables should be blown into the microduct route normally before connecting it to the joint closure.
- Do not connect the joint closure to the end of the microduct route before cable blowing. The cables should not be blown directly to the joint closure.
- When blowing the cables, make sure that you leave enough extra length to the cables after the microduct route.
- After successfully blowing, the extra lengths in cables can be pulled by hand through the microduct connected to the joint closure.
- Perform all installation and termination work as usually and according Nestor Cables Ltd. guidelines. However, do not close the joint closure yet.
- After finished installation and termination work, in order to seal the microduct route, the compression nuts in the cable seals and gas blocks must be screwed firmly to closed position. Do not pull the cable when the cable seal is in the closed position to prevent possible damage to the cable seal.
- When the system is sealed and everything set up, the joint closure can be closed.
- Before installation, it is important to read the technical specifications and installation instructions for each product to make sure that products will be handled, transported, stored, installed, used and recycled properly.

## Optional accessories

- LV2543 Nestor Mech Seal 6 x 10mm

- LV2544 Nestor Mech Seal 4 x 15mm

- LV2545 Nestor Mech Seal 2 x 18mm

- LV2546 Nestor Mech Seal 2 x 23mm

- LV1903 Pole and wall mount
