

DATASHEET

LED Magnetic Lighting Unit, 230 V AC with IR-Sensor and Switch

Description

LED lighting unit in high-quality aluminium profile for magnetic mounting at any position in cabinet
 Selective lighting due to turnable magnetic holder (turning angle ca. 180°)
 IR sensor replaces door contact switch: lighting unit is turned on for 45 sec. at motion detection
 Self-adhesive sensor and power supply for easy mounting in cabinet
 At glass and non-perforated steel doors the sensor can be easily glued directly onto the 19" profile for turning light on when door is opened, for perforated doors mounting sidely in the cabinet, e.g. at a depth-rail, is recommended

General data

Type of electrical connection	Plug/connector
Type of lamp	LED
Magnetic mounting	True
With on/off switch	True
With socket outlet	False
With light sensor	True
Material	Aluminium
Degree of protection (IP)	IP20

Electrical characteristics

Rated voltage	230 V
Lamp power	4 W
