Chapter 1

Product Overview

Introduction - EMD1 AP

Key Features

- > Dual radio 2x2 802.11 ac/a/b/g/n Access Point with multi-user MIMO (MU-MIMO)
- > Support up to 867 Mbps in 5GHz frequency band and 400 Mbps in 2.4GHz frequency band (with 2ss/VHT40 clients).
- > High powered amplifiers to improve the wireless coverage and uses a special radio frequency pattern to increase its receiver sensitivity for improved performance.
- > Support 802.11ac Wave 2.0 technology to enhance overall bandwidth and speed to wireless client devices.
- > Systemic and distributed management over EnGenius ezMaster and EWS Management switch without licensing or subscription fee.
- > 360° omni-directional antennas to achieve comprehensive coverage for networking client devices under a pervasive environment.
- > Compliance with 802.3af & 48V PoE Input for flexible installation over 100 meters (328 feet).
- > Perform one-click update to deliver a configuration over multi-segments for managed Access Points.
- > Choose an operating mode to meet your management and deployment requirement.

Introduction

EnGenius Mesh Dot (EMD1) is designed with a smaller size, but provides highly AC1300 performance combine with power plug. EMD1 also be built-in EnMesh™ wireless link technology to extend Wi-Fi ranges throughout your entire home or small office all the time.

To protect sensitive data during wireless transmissions, the device offers different encryption settings for wireless communications, including industry standard WPA and WPA2 encryption. The AP also includes MAC address filtering to allow network administrators to provide network access only to known computers and other devices based on their MAC addresses.

System Requirements

The following are the Minimum System Requirements in order configure the device:

- Computer with an Ethernet interface or wireless network capability
- Windows OS (XP, Vista, 7, 8), or Mac OS, Linux-based operating systems
- Web-browsing application (i.e. Edge, Internet Explorer, Chrome, Firefox, Safari, or another similar browser application)

Package Contents

The EMD1AP package contains the following items (all items must be in package to issue a refund):

- EMD1 Mesh Dot Access Point
- Network Cable
- Security Chain
- Screw Set
- Quick Installation Guide

Technical Specifications - EMD1 AP

Radio Specification

Dual Concurrent Radio:

- 2.4 GHz: 802.11b/g/n with max data rate up to 400 Mbps
- 5 GHz: 802.11a/n/ac with max data rate up to 867 Mbps

Transmit Power:

- Max transmit power is limited by regulatory power

Radio Chains/Spatial Streams:

- 2 x 2; 2

Supported Radio Technology:

- 802.11b: Direct-Sequence Spread-Spectrum (DSSS)
- 802.11a/g/n/ac: Orthogonal Frequency-Division Multiplexing (OFDM)

Channelization:

- 802.11ac with 20/40/80 MHz channel width
- 802.11n with 20/40 MHz channel width
- 802.11a/b/g with 20 MHz channel width

Supported Modulation:

- 802.11b: BPSK, QPSK, CCK
- 802.11a/g/n: BPSK, QPSK, 16-QAM, 64-QAM
- 802.11ac: BPSK, QPSK, 16-QAM, 64-QAM, 256-QAM

Supported data rates (Mbps):

- 802.11b: 1, 2, 5.5, 11
- 802.11a/g: 6, 9, 12, 18, 24, 36, 48, 54
- 802.11n: 6.5 to 400 (MCS0 to MCS15)
- 802.11ac: 6.5 to 867 (MCS0 to MCS9, NSS= 1 to 2)

Internal Antenna:

- 2.2 dBi 2.4 GHz antennas
- 5.9 dBi 5 GHz antennas

Interface:

- 1 x 10/100/1000 Mbps Port
- 1 x Reset button
- 1 x Security Slot

Dimensions (W x D x H):

- 61 x 61 x 47 mm

Mounting:

- Wall mount (standard US/EU single gang wall jack)

Environment:

- Operating temperature: 0°C~35°C
- Operating humidity: 0%~90% typical
- Storage temperature: -20°C~60°C

Wireless

Operating Mode:

- AP Mode

Mesh AP Mode

Auto Channel Selection:

- Setting varies by regulatory domains
- SSIDs:

- Supports up to 8 SSIDs per frequency band
- VLAN Tag / VLAN Pass-through
- Wireless Client List

Guest Network:

- Allocates a separate network segment for guest access within the same WLAN
- QoS:
- Supports 802.11e/WMM

Band Steering

Mobility:

- PMKSA support for fast roaming
- Security:

- WEP encryption: 64/128/152-bit
- WPA/WPA2 Enterprise/PSK
- Hidden SSID
- MAC address filtering (up to 50 MAC)

Technical Specifications - EMD1 AP

Band Steering

Mobility:

- PMKSA support for fast roaming

Security:

- WEP encryption: 64/128/152-bitSecurity:
- WEP encryption: 64/128/152-bitLED Indicator
- WPA/WPA2 Enterprise/PSK
- Hidden SSID
- MAC address filtering (up to 50 MAC)
- Client Isolation

Management

Deployment Options

- Standalone Mode
- Managed Mode (by Neutron Switch or ezMaster)

Configuration

- Web Interface (HTTP)
- SNMP v1/v2c/v3 with MIB I/II and private MIB
- CLI (Telnet)

Firmware Upgrade

- Web interface or CLI (FTP/HTTP)

Backup / Restore Settings

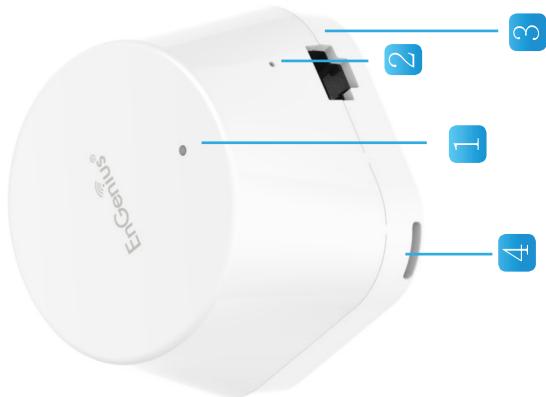

- Revert to factory default settings

Schedule Reboot:

- Specifies interval to reboot system periodically
- E-mail Alert/Syslog Notification

Physical Interface (EMD1 AP)

Dimensions and Weights
61 x 61 x 47 mm

1. LED Indicators: LEDs for Power, 5GHz, 2.4GHz Wireless Connection, Reset, Reboot.
2. Reset Button: Press, hold for over 10 seconds to reset to factory default settings
3. 10/100/1000 LAN Ports: RJ45 access ports
4. Anti-Theft Protection Hole by Security Chain
5. Power Outlet Pin 100 - 240V 50-60Hz

Chapter 2

Before You Begin

Computer Settings

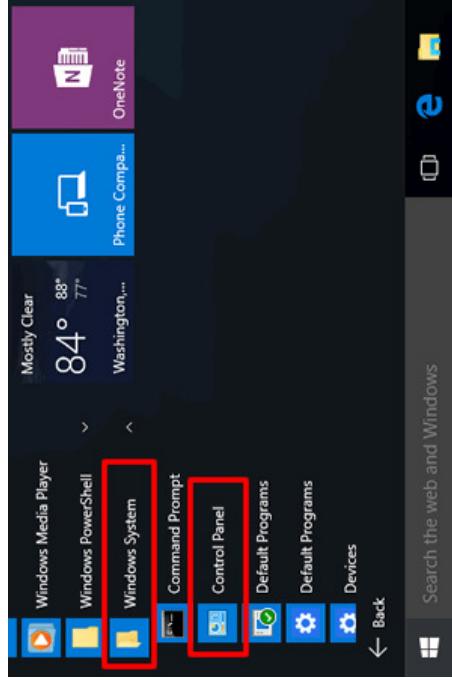

Windows XP/Windows 7/Windows 8/Windows 10

In order to use the Access Point, you must first configure the TCP/IPv4 connection of your Windows OS computer system.

1a. Click the Start button and open the Control Panel

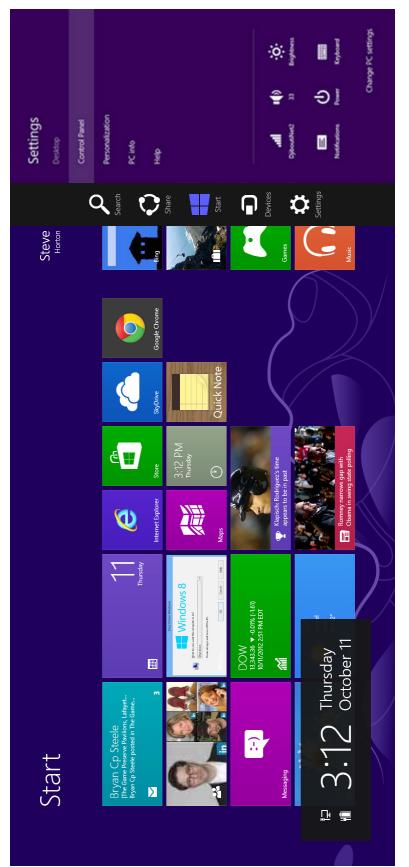

Windows 7

Windows 10

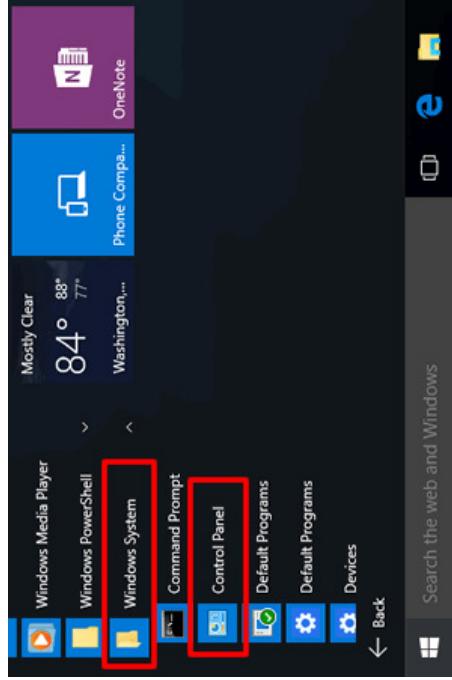

Windows 8 OS

1b. Move your mouse to the lower right hot corner to display the Charms Bar and select the Control Panel in Windows 8 OS.

Windows 8

1c. In Windows 10, click Start to select All APPs to enter the folder of Windows system for selecting Control Panel.

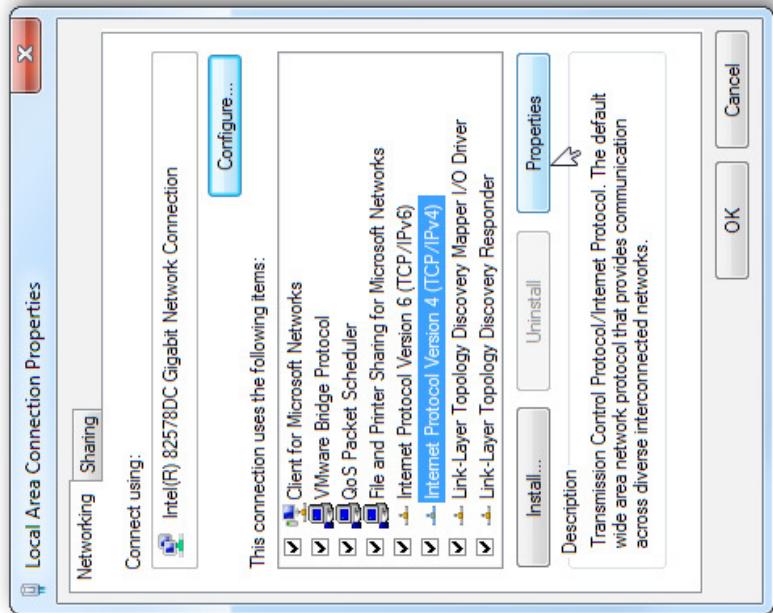

Windows 10

2a.In Windows XP, click **Network Connections**.

Network Connections

4. Select **Internet Protocol Version 4 (TCP/IPv4)** and then select **Properties**.

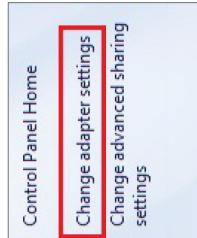

2b.In Windows 7/Windows 8/Windows 10, click **View Network Status and Tasks** in the **Network and Internet** section, then select **Change adapter settings**.

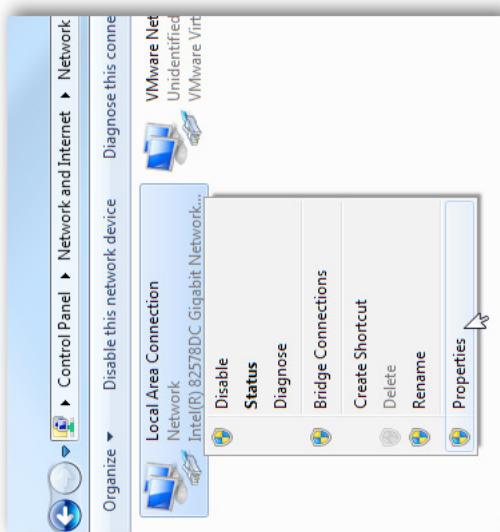

Network and Internet

View network status and tasks
Choose homegroup and sharing options

3. Rightclick on **Local Area Connection** and select **Properties**.

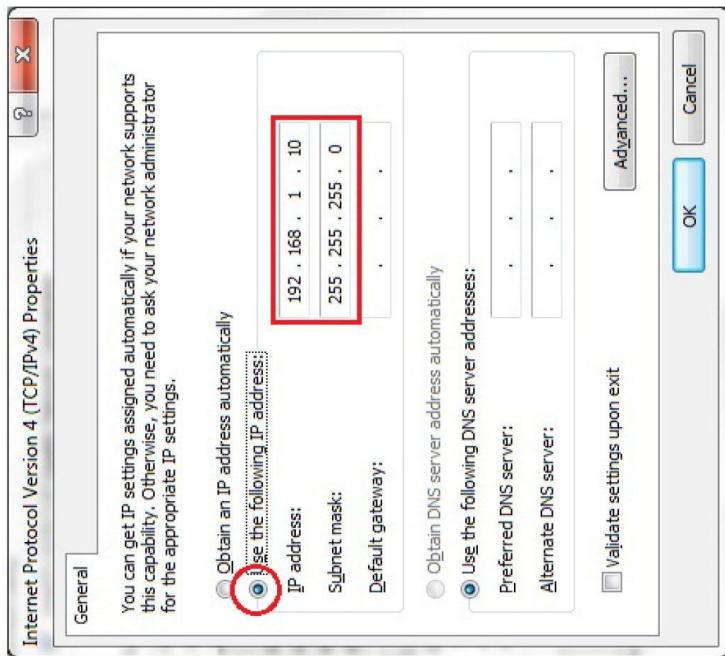

5. Select **Use the following IP address** and enter an IP address that is different from the Access Point and Subnet mask, then click **OK**.

Note: Ensure that the IP address and Subnet mask are on the same subnet as the device.

For example: AP IP address: 192.168.1.1

PC IP address: 192.168.1.2-192.168.1.255

PC Subnet mask: 255.255.255.0

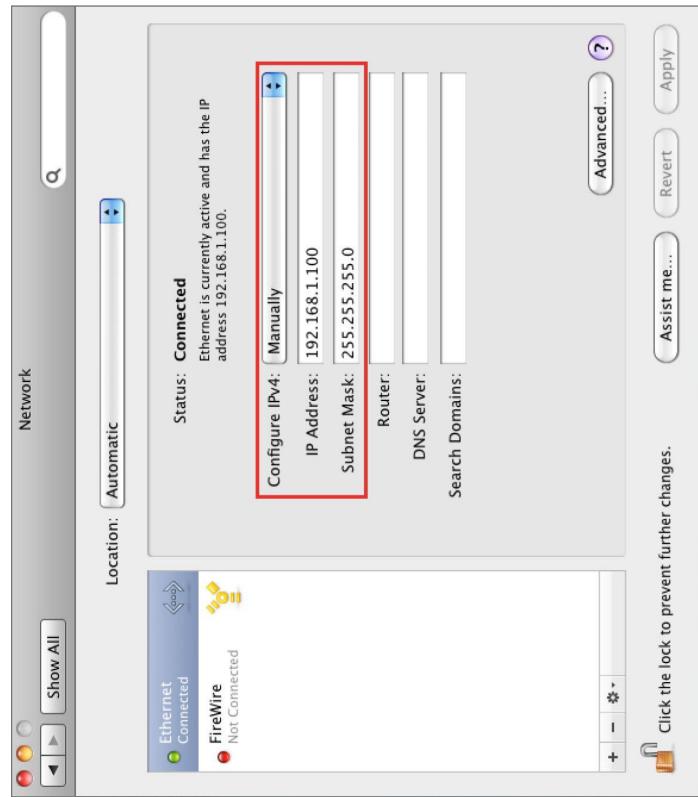

Apple Mac OS X

4. In Configure IPv4, select Manually.

1. Go to **System Preferences** (which can be opened in the Applications folder or selecting it in the Apple Menu).
2. Select **Network** in the **Internet & Network** section.

3. Highlight Ethernet.

1. Enter an IP address that is different from the Access Point and Subnet mask then press **OK**.
5. Enter an IP address that is different from the Access Point and Subnet mask then press **OK**.

Note: Ensure that the IP address and Subnet mask are on the same subnet as the device.

For example: A device IP address: 192.168.1.1

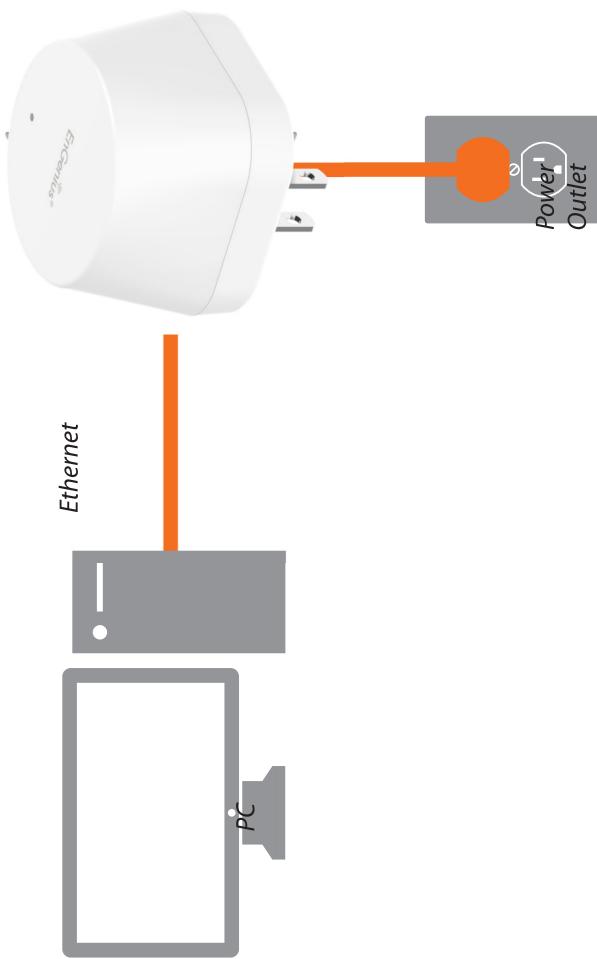

PC IP Address: 192.168.1.2 - 192.168.1.255

PC Subnet mask: 255.255.255.0

6. Click **Apply** when done.

Hardware Installation

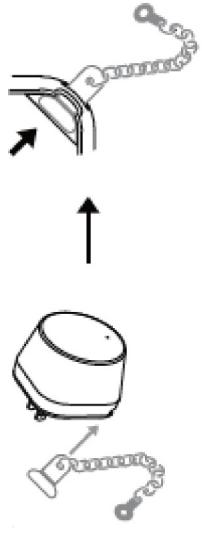

1. Ensure that the computer in use has an Ethernet Controller port (RJ-45 Ethernet Port). For more information, verify with your computer's user manual.
2. Connect one end of the Category 5e Ethernet cable into the RJ-45 port of the EMD1AP and the other end to the RJ-45 port of the computer. Ensure that the cable is securely connected to the EMD1AP and the computer.
3. Connect the EMD1 AP to either to an available electrical outlet. Once both connections are secure, verify the following:
 - a) Ensure that the **POWER** light is on (it will be **Blue**).
 - b) Once all three lights are on, proceed to set up the Access Point using the computer.

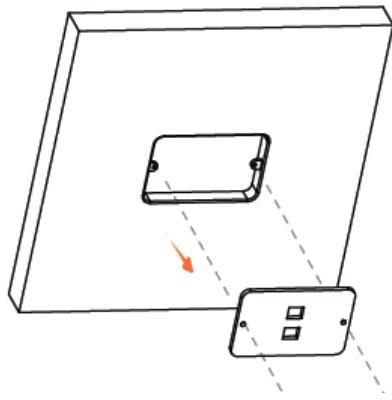

Mounting the EMD1 AP

The EMD1 AP mounts onto an electrical outlet.

1. Use the security chain to through the security hole of EMD1.

2. Remove the cover from the outlet box, retaining the original cover screws.

3. Fasten the iron hole with the outlet box by using the original cover screws, or fasten the screw on the wall.

Chapter 3

Configuring your Access Point

Configuring Your Access Point

This section will show you how to configure the device using the web-based configuration interface.

Default Settings

Please use your Ethernet port or wireless network adapter to connect the Access Point.

Web Configuration

1. Open a web browser (Internet Explorer/Firefox/Safari) and enter the IP Address <http://192.168.1.1>.

2. The default username and password are: admin. Once you have entered the correct username and password, click the **Login** button to open the web-based configuration page.

3. If successful, you will be logged in and see the EAP User Menu.

The screenshot shows the EAP900H User Menu. At the top, it displays "EnGenius®" and "EAP900H Dual Radio AP, 3T3R, 450Mbps + 450Mbps". Below this is a navigation menu with options like Overview, Device Status, Connections, Network, Basic, Wireless, WPS, Management, Advanced, Time Zone, Management VLAN ID, WiFi Scheduler, Tools, and System Manager. Under "Management", there is a "Changes : 11" button. The main area shows "Device Information" with details such as Device Name (EAP900H), MAC Address (-LAN: 88:DC:96:03:CE:68, -Wireless LAN: 2.4GHz: 88:DC:96:03:CE:69, -Wireless LAN: 5GHz: 88:DC:96:03:CE:6A), Country (Default), Current Local Time (Fri Oct 18 13:32:50 UTC 2013), Firmware Version (2.0.7), Management VLAN ID (4096), and LAN Information - IPv4 (IP Address: 192.168.1.1, Subnet Mask: 255.255.255.0, Gateway: 192.168.1.1, Primary DNS: 0.0.0.0, Secondary DNS: 0.0.0.0).

Note: If you have changed the default LAN IP Address of the Access Point, ensure you enter the correct IP Address.

Chapter 4

Building a wireless Network

The EMD1AP has the ability to operate in various modes. This chapter describes the operating modes of above two models.

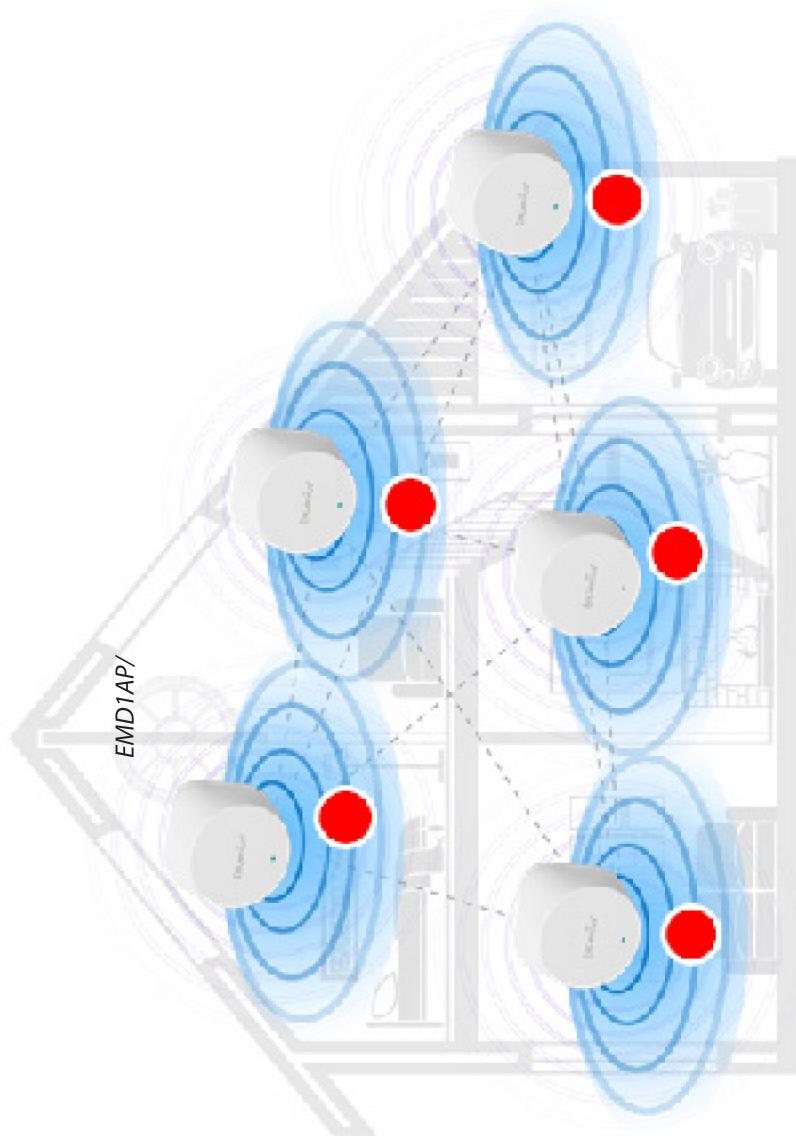

Access Point Mode

In Access Point Mode, the EMD1AP behaves like a central connection for stations or clients that support IEEE 802.11 a/b/g/n networks. The stations and clients must be configured to use the same SSID (Service Set Identifier) and security password to associate with the EMD1AP. The EMD1 AP supports up to eight (8) SSIDs per band (16 total) at the same time for secure access.

AP Mesh Mode

Under the AP Mesh mode, the EMD1AP can be used as the central connection hub for station or clients that support IEEE 802.11 b/g/n network. Under this mode, the EMD1AP can be configured with the same Mesh SSID and security password in order to associate with other EMD1, as well as connect with clients under the same SSID and encryption signatures. For example, you would use one band to connect Access Points in range with Mesh mode and the other band to broadcast traffic on the network.

Chapter 5

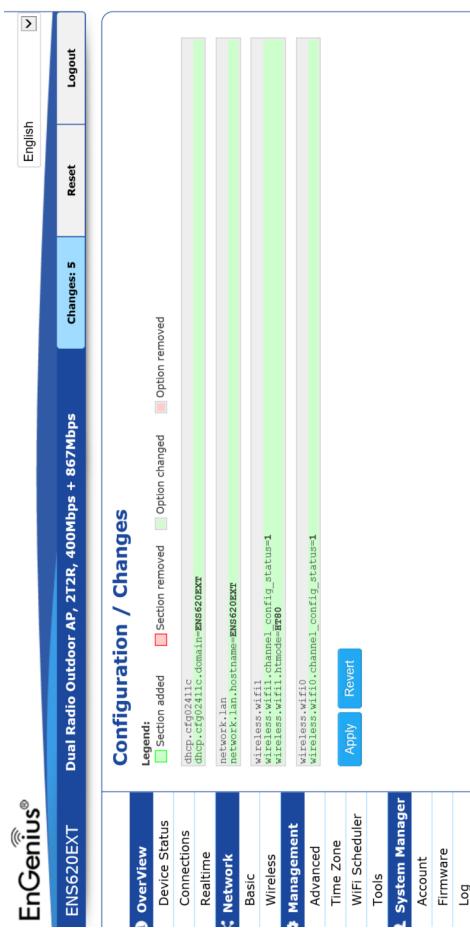

Overview

Overview

Save Changes

This page lets you save and apply the settings shown under **Unsaved changes list**, or Revert the unsaved changes and revert to the previous settings that were in effect.

Note: VLAN ID is only applicable in Access Point, WDS AP or WDS BR mode.

Device Information

Device Name	ENSG620EXT
MAC Address	- LAN1
	- LAN2
	- Wireless LAN - 2.4GHz
	- Wireless LAN - 5GHz
Country	USA
Current Local Time	Tue Jul 12 11:45:00 2016
Uptime	0h 4m 57s
Firmware Version	1.0.0
Management VLAN ID	Untagged

- The **Memory Information** section shows usage of memory such as Total Available, Free, Cached, Buffered

Memory Information

Total Available	128884 kB / 236336 kB (54%)
Free	93352 kB / 236336 kB (40%)
Cached	24908 kB / 236336 kB (10%)
Buffered	8624 kB / 236336 kB (3%)

Device Status

Clicking the **Device Status** link under the **Overview** menu shows the status information about the current operating mode.

- The **Device Information** section shows general system information such as Device Name, MAC Address, Current Time, Firmware Version, and Management VLAN ID

- The **LAN Information** section shows the Local Area Network settings such as the LAN IP Address, Subnet mask, Primary DNS Address, Secondary DNS Address, status of DHCP client, and status of Spanning Tree protocol (STP).

LAN Information - IPv4

IP Address	192.168.1.1
Subnet Mask	255.255.255.0
Gateway	192.168.1.1
Primary DNS	0.0.0.0
Secondary DNS	0.0.0.0
DHCP Client	Disable
Spanning Tree Protocol(STP)	Disable

Wireless LAN Information - 2.4GHz

Operation Mode	Access Point
Wireless Mode	802.11 B/G/N
Channel Bandwidth	20 MHz
Channel	2.412 GHz(Channel 1)
Profile	SSID
#1	EnGenius_Test
#2	EnGenius-mac- 2-2.4GHz
#3	EnGenius-mac- 3-2.4GHz
#4	EnGenius-mac- 4-2.4GHz

#6	EnGenius-mac- 6-2.4GHz
#7	EnGenius-mac- 7-2.4GHz
#8	EnGenius-mac- 8-2.4GHz
#9	EnGenius-2.4GHz_GuestNetwork

Wireless LAN Information - 5GHz

Operation Mode	WDS Access Point
Wireless Mode	802.11 N/A/C
Channel Bandwidth	80 MHz
Channel	5.180 GHz(Channel 36)
Profile	SSID
#1	EnGenius_Test
#2	EnGenius-mac- 2-5GHz
#3	EnGenius-mac- 3-5GHz
#4	EnGenius-mac- 4-5GHz

The **Wireless LAN Information 2.4 GHz/5 GHz** section shows wireless information such as Operation Mode, Frequency, and Channel. Since this Access Point supports multiple-SSIDs, information about each SSID, the ESSID, and security settings, are displayed

Note: Profile Settings are only applicable in Access Point and WDS AP modes.

- The **Statistics** section shows Mac information such as SSID, MAC address, RX and TX.

Statistics

SSID	MAC	RX(Packets)	TX(Packets)
Ethernet	88:DC:96:00:00:10	134.37 KB(829 Pkts.)	893.75 KB(857 Pkts.)
EnGenius-mac- 1-2.4GHz	88:DC:96:00:00:12	0.00 B(0 Pkts.)	21.34 KB(149 Pkts.)
EnGenius-mac- 1-SGHZ	88:DC:96:00:00:13	0.00 B(0 Pkts.)	8.02 KB(44 Pkts.)

Connections

Realtime

2.4 GHz/5 GHz Connection List

Click the connection link under the Overview menu displays the connection list of clients associated to the AP's 2.4 GHz/5 GHz, along with the MAC addresses and signal strength for each client. Clicking **Refresh** updates the client list.

Note: Only applicable in Access Point and WDS AP modes.

2.4 GHz/5 GHz WDS Link List

Click the connection link under the Overview menu. This page displays the current status of the WDS link, including WDS Link ID, MAC Address, Link Status and RSSI.

Note: Only applicable in WDS AP and WDS Bridge modes.

Connection List - 2.4GHz

SSID	MAC Address	TX	RX	RSSI	Block

WDS Link List - 5GHz

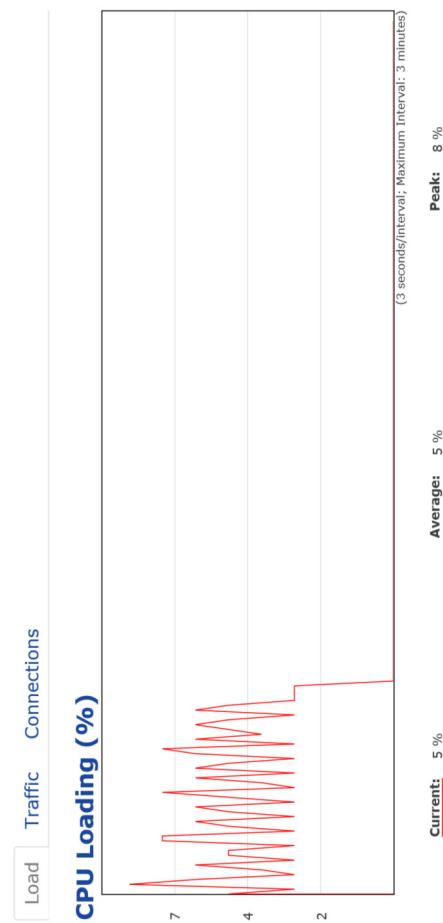

WDS Link ID#	MAC Address	Link Status	RSSI(dBm)

Refresh

Realtime

The Realtime section contains the following options:

CPU Loading: 3 minutes CPU loading percentage information, it displays current loading, average loading and peak loading status. Left bar is loading percentage; button is time tracing. Interval is every 3 seconds

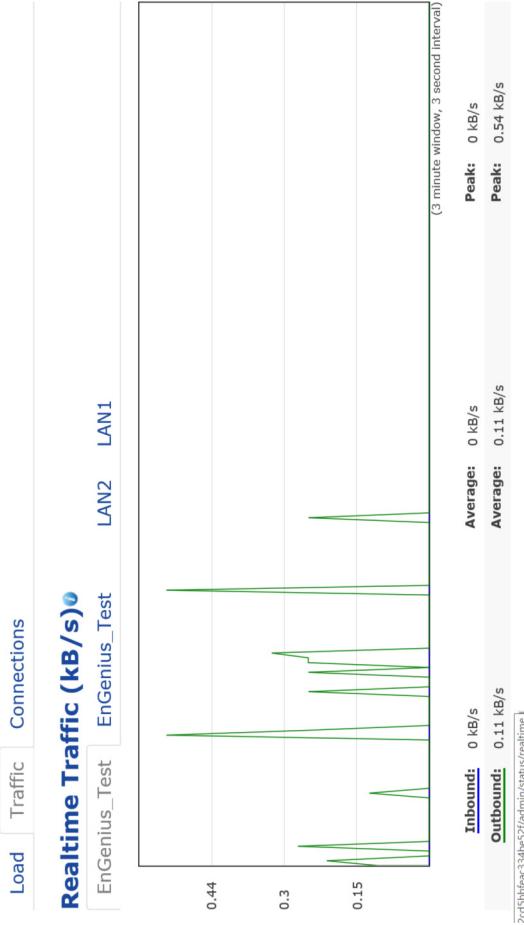

Peak: 8 %

Average: 5 %

Current: 5 %

Traffic Loading: 2.4GHz and 5GHz and Ethernet port inbound and outbound traffic by current, average and peak time.

Realtime Connection (Pkts): Overview on current active network connections. It displays UDP and TCP packets information and other connection status. UDP connections curve is in blue; TCP connection curve is in green; others curve is in red. Below of chart shows connections source and destination.

Chapter 6

Network

Basic

IPv4/IPv6 Settings

This page allows you to modify the device's IP settings.

IPv4 Settings

IP Network Setting	<input type="radio"/> DHCP <input checked="" type="radio"/> Static IP	192.168.1.1
IP Address	255.255.255.0	
Subnet Mask	192.168.1.1	
Gateway	0.0.0.0	
Primary DNS	0.0.0.0	
Secondary DNS		

IPv6 Settings

IP Address	
Subnet Prefix Length	
Gateway	
Primary DNS	
Secondary DNS	

Primary/Secondary DNS: The primary/secondary DNS address for this device.

Save: Click **Save** to confirm the changes.

Spanning Tree Protocol (STP) Settings

This page allows you to modify the Spanning Tree settings. Enabling the Spanning Tree protocol will prevent network loops in your LAN network.

Spanning Tree Protocol (STP) Settings

Status	<input type="radio"/> Enable <input checked="" type="radio"/> Disable	seconds (1-10)
Hello Time	2	
Max Age	20	seconds (6-40)
Forward Delay	15	seconds (4-30)
Priority	32768	(0-65535)

IP Network Settings: Select whether the device IP address will use a static IP address specified in the IP address field or be obtained automatically when the device connects to a DHCP server.

IP Address: The IP address of this device.

Subnet Mask: The IP Subnet mask of this device.

Gateway: The Default Gateway of this device. Leave it blank if you are unsure of this setting.

Spanning Tree Status: Enables or Disables the Spanning Tree function. Default is Disable.

Hello Time: Specifies Bridge Hello Time in seconds. This value determines how often the device sends handshake packets to communicate information about the topology throughout the entire Bridged Local Area Network.

Max Age: Specifies Bridge Max Age in seconds. If another

bridge in the spanning tree does not send a hello packet for a long period of time, it is assumed to be inactive.

Forward Delay: Specifies Bridge Forward Delay in seconds. Forwarding delay time is the time spent in each of the Listening and Learning states before the Forwarding state is entered. This delay is provided so that when a new bridge comes onto a busy network, it analyzes data traffic before participating in the network.

Priority: Specifies the Priority Number. A smaller number has a greater priority than a larger number.

Save: Click **Save** to confirm the changes.

Chapter 7

2.4 GHz & 5 GHz wireless

Wireless

Wireless Settings

devices to network to the 2.4GHz band only if the client devices are not currently associated on 2.4GHz radio in this AP.

Wireless Settings	EWS330AP
Device Name	

Device Name: Enter a name for the device. The name you type appears in SNMP management. This name is not the SSID and is not broadcast to other devices.

Band Steering (Available on ENS620EXT): Enable Band Steering to send 802.11n clients to the 5 GHz band, where 802.11b/g clients cannot go, and leave 802.11b/g clients in 2.4GHz to operate at their slower rates. Before implementing this feature, we suggest you to assure the both 2.4GHz and 5GHz SSID, as well as security settings must be the same. EnGenius Band Steering supports following advanced settings,

Band Steering	Prefer 5GHz
5GHz RSSI	-75
dBm	0
NOTE: In order for Band Steering function to work properly, both 2.4GHz and 5GHz SSID and Security Settings must be the same.	

***Prefer 5GHz:** When band steering is configured to Prefer 5GHz mode, the AP will steer dual band capable client devices to 5GHz radio when the RSSI value of these client devices on 5GHz radio is more than set one. The allowed RSSI value for default setting is -75dBm.

Band Balance	Percent of clients on 5GHz radio	75
5GHz RSSI	-75	
dBm	0	
NOTE: In order for Band Steering function to work properly, both 2.4GHz and 5GHz SSID and Security Settings must be the same.		

***Band Balance:** When band steering is configured to Band Balance mode, the AP will steer dual band capable client devices to 5GHz when the RSSI value of these client devices on 5GHz radio is more than set one. To evenly allocate RF resource on the both 2.4GHz and 5GHz radios, users also can set the portion of client devices on 5GHz radio to assure smoothly connection. The default value of the 5GHz radio is 75%.

Wireless Settings	ENS620EXT
Device Name	USA
Country / Region	Force 5GHz
Band Steering	INFORMATION: When band steering is configured to Force 5GHz mode, the AP will not allow a dual band client to connect to the 2.4GHz band only if the client is not currently associated on the 2.4GHz radio of this AP. NOTE: In order for Band Steering function to work properly, both 2.4GHz and 5GHz SSID and Security Settings must be the same.

***Force 5GHz:** When band steering is configured to Force 5GHz mode, the AP will not dual band capable client

Save: Click Save to confirm the changes.

This page displays the current status of the Wireless settings of this AP.

Key #1	<input type="text"/>
Key #2	<input type="text"/>
Key #3	<input type="text"/>
Key #4	<input type="text"/>

Input Type:

ASCII: Regular Text (recommended)

Hexadecimal Numbers (For advanced users)

Key Length: Select the desired option and ensure that wireless clients use the same setting. Your choices are 64, 128, and 152-bit password lengths.

Default Key: Select the Key you wish to be the default. Transmitted data is **ALWAYS** encrypted using the Default Key; the other Keys are for decryption only. You must enter a Key Value for the Default Key.

Encryption Key Number: Enter the Key Value or values you wish to use. Only the Key selected as Default is required. The others are optional.

Security Mode: Including WEP, WPA-PSK, WPA2-PSK, WPA-PSK Mixed, WPA, WPA2, and WPA Mixed. We strongly recommend you to use WPA2-PSK mode.

* **Setting of WEP mode:**

Auth Type: Select Open System or Shared Key.

Wireless Security - 5GHz	WPA-PSK	WPA-Enterprise
Security Mode	WPA-PSK	WPA-Enterprise
Encryption	AES	AES
Passphrase		
Group Key Update Interval	3600	3600
Radius Server		
Radius Port	1812	Default 1812
Radius Secret		
Radius Accounting	Disable	▼
Radius Accounting Server		
Radius Accounting Port	1813	
Radius Accounting Secret		
Interim Accounting Interval	600	

* **Setting of WPA-PSK, WPA2-PSK and WPA-Enterprise (Pre-Shared Key):**

Encryption: You may select AES, TKIP or Both (TKIP+AES) to be the encryption type you would like. Please ensure that your wireless clients use the same settings.

Passphrase: Wireless clients must use the same Key to associate the device. If using ASCII format, the Key must be from 8 to 63 characters in length. If using HEX format, the Key must be 64 HEX characters in length.

Group Key Update Interval: Specifies how often, in seconds, the Group Key changes. The default value is 3600.

* **Setting of WPA-Enterprise & WPA2-Enterprise (Pre-Shared Key):**

Encryption: Select the WPA encryption type you would like. Please ensure that your wireless clients use the same settings.

Radius Server: Enter the IP address of the Radius server.

Radius Port: Enter the port number used for connections to the Radius server.

Radius Secret: Enter the secret required to connect to the Radius server.

Radius Accounting: Enable or disable accounting feature.

Radius Accounting Server: Enter the IP address of the Radius accounting server.

Radius Accounting Port Enter the port number used for connections to the Radius accounting server.

Radius Accounting Secret: Enter the secret required to connect to the Radius accounting server.

Interim Accounting Interval: Specifies how often, in seconds, the accounting data sends.

Note: 802.11n does not allow WEP/WPA-PSK TKIP/WPA2-PSK TKIP security mode. The connection mode will automatically change from 802.11n to 802.11g.

Wireless Advanced

Wireless Traffic Shaping

Traffic shaping regulates the flow of packets leaving an interface to deliver improved Quality of Service.

Wireless Traffic Shaping		
Enable Traffic Shaping	<input type="radio"/> Enable <input checked="" type="radio"/> Disable	<input type="checkbox"/> Per User
Download Limit	100 Mbps (1-999)	<input type="checkbox"/> Per User
Upload Limit	100 Mbps (1-999)	<input type="checkbox"/> Per User

Save: Click Save to confirm the changes.

Enable Traffic Shaping: Default is disable. You may check this option to enable Wireless Traffic Shaping per SSID.

Download Limit: Specifies the wireless transmission speed used for downloading.

Upload Limit: Specifies the wireless transmission speed used for uploading.

Per User: Check this option to enable wireless traffic shaping per user function. This function allow users to limit the maximum download / upload bandwidth for each client devices on this SSID.

Fast Roaming

Enable the function to serve mobile client devices that roam from Access Point to Access Point. Some applications running on Client devices require fast re-association when they roam to a different Access Point

Please enter the settings of the SSID and initialize the Security mode to WPA enterprise, as well as to set the Radius Server firstly. Users can enable the Fast Roaming and implement the advanced search.

Please also set the same enterprise Encryption under the same SSID on other Access Points and enable the Fast Roaming. When the configuration is realized on different Access Point, the mobile client devices can run the voice service and require seamless roaming to prevent delay in conversation from Access Point to Access Point.

Fast Roaming

Enable Fast Roaming

Enable Disable

Enable Fast Roaming: Enable or disable fast roaming feature.

Enable Advanced Search: Enable or disable advanced search feature.

Guest Network Settings

Adding a guest network to allow visitors to use the internet without giving out your office or company wireless security. You can add a guest network to each wireless network in the 2.4GHz frequencies and 5GHz frequencies.

Guest Network Settings

Enable	SSID	Edit	Security	Hidden SSID	Client Isolation
<input type="checkbox"/>	Engenius-2.4GHz_GuestNetv	Edit	None	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<input type="checkbox"/>	Engenius-5GHz_GuestNetv	Edit	None	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Manual IP Settings					
- IP Address					
192.168.200.1					
- Subnet Mask					
255.255.255.0					
Automatic DHCP Server Settings					
- Starting IP Address					
192.168.200.100					
- Ending IP Address					
192.168.200.200					
- WINS Server IP					
0.0.0.0					

SSID: Specified the SSID for the current profile.. Choices given are: Disabled, Deny MAC in the list, or Allow MAC in the list.

Hidden SSID: Check this option to hide SSID from clients, If checked, this SSID will not appear in the AP detect.

Client Isolation: Click the appropriate radio button to allow or prevent communication between client devices.

IP address: The IP Address of this device.

Subnet Mask: The IP Subnet mask of this device.

Starting IP Address: The first IP Address in the range of the addresses assigned by the DHCP server.

Ending IP Address: The last IP Address in the range of addresses assigned by the DHCP server.

RSSI Threshold

Fast Handover	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
RSSI	-70 dBm (Range: -60dBm ~ -100dBm)

Enable: Enable the Fast Handover feature by ensuring that each client is served by at least one Access Point at any time. Access Points continuously monitor the connectivity quality of any client in their range and efficiently share this information with other Access Points in the vicinity of that client to coordinate which of them should serve the client best.

RSSI: Enter the RSSI (Received Signal Strength Index) in order to determine the handover procedure which the current wireless link will terminate. RSSI is an indication of the power level being received by the antenna. Therefore, the higher the RSSI number, the stronger the signal.

Wireless MAC Filtering

Wireless MAC Filtering is used to allow or deny network access to wireless clients (computers, tablet PCs, NAS, smartphones, etc.) according to their MAC addresses. You can manually add a MAC address to restrict permission to access EAP1750H. The default setting is: **Disable Wireless MAC Filter**.

Note: Only applicable in Access Point and WDS AP mode.

ACL (Access Control List) Mode: Determines whether network access is granted or denied to clients whose MAC addresses appear in the MAC address table on this page. Choices given are: Disabled, Deny MAC in the list, or Allow MAC in the list.

MAC Address: Enter the MAC address of the wireless client you wish to configure for.

Add: Click **Add** to add the MAC address to the MAC Address table.

No.	MAC Address
	: : : : : :

Delete: Deletes the selected entries.

Save: Click **Save** to apply the changes.

ACL (Access Control List) Mode: Determines whether

network access is granted or denied to clients whose MAC addresses appear in the MAC address table on this page.

Choices given are: Disabled, Deny MAC in the list, or Allow MAC in the list.

MAC Address: Enter the MAC address of the wireless client

you wish to configure for.

Add: Click **Add** to add the MAC address to the MAC Address table.

Delete: Deletes the selected entries.

Save: Click **Save** to apply the changes.

Wireless Advanced

This page allows you to configure advanced wireless settings for the EW550AP/EW5511AP. It is recommended that the default settings are used unless the user has experience with more advanced networking features.

2.4 GHz/5 GHz Wireless Advanced

	2.4GHz	5GHz
Operation Mode	Access Point	Access Point
Wireless Mode	802.11 B/G/N	802.11 A/N
Channel HT Mode	20/40 MHz	40 MHz
Extension Channel	Upper Channel	Lower Channel
Channel	Auto	Auto
Transmit Power	Auto	Auto
Data Rate	Auto	Auto
RTS / CTS Threshold (1 - 2346)	2346	2346
Client Limits	127	127
Enable	Enable	Enable
Aggregation	32	32
Frames	Frames	Frames
Bytes(Max)	50000	50000
AP Detection	Scan	Scan

Data Rate: Select a data rate from the drop-down list. The data rate affects throughput of data in the EAP1750H. The lower the data rate, the lower the throughput, though transmission distance will be lowered as well.

Transmit Power: Sets the power output of the wireless signal.

RTS/CTS Threshold: Specifies the threshold package size for RTC/CTS. A smaller number causes RTS/CTS packets to be sent more often and in turn consumes more bandwidth.

Distance: Specifies the distance between Access Points and clients. Longer distances may drop high-speed connections.

Aggregation: Merges data packets into one packet. This option reduces the number of packets, but increases packet sizes.

Save: Click Save to confirm the changes.

Chapter 8

Management

MGMT VLAN Settings

Management VLAN Settings

This page allows you to assign a VLAN tag to packets sent over the network. A VLAN is a group of computers on a network whose software has been configured so that they behave as if they were on a separate Local Area Network (LAN). Computers on VLAN do not have to be physically located next to one another on the LAN.

Note: Only applicable in Access Point and WDS AP modes.

Management VLAN Settings ?	
Status	<input type="radio"/> Enable <input checked="" type="radio"/> Disable 4094
Caution: If you encounter disconnection issue during the configuration process, verify that the switch and the DHCP server can support the new VLAN ID and then connect to the new IP address.	

Management VLAN: If your network includes VLANs, you can enable **Management VLAN ID** for packets passing through the Access Point with a tag.

Note: Click **Save** to confirm the changes or **Cancel** to cancel and return to previous settings.

Note: If you reconfigure the Management VLAN ID, you may lose your connection to this AP. Verify that the

DHCP server supports the reconfigured VLAN ID and then reconnect to this AP using the new IP address.

Advanced Settings

SNMP Settings

This page allows you to assign the Contact Details, Location, Community Name, and Trap Settings for a Simple Network Management Protocol (SNMP). SNMP is a networking management protocol used to monitor network attached devices. SNMP allows messages (called protocol data units) to be sent to various parts of the network. Upon receiving these messages, SNMP compatible devices (called agents) returns the data stored in their Management Information Bases.

SNMP Settings	
Status	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Contact	
Location	
Community Name (Read Only)	public
Community Name (Read Write)	private
Trap Destination	
- Port	162
- IP Address	
- Community Name	public
SNMPv3 Settings	
- Status	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
- Username	admin
- Authorized Protocol	MD5
- Authorized Key	12345678
- Private Protocol	DES
- Private Key	12345678
- Engine ID	

SNMP Enable/Disable: Enables or disables the SNMP feature.

Contact: Specifies the contact details of the device.

Location: Specifies the location of the device.

Community Name (Read Only): Specifies the password for the SNMP community for read only access.

Community Name (Read/Write): Specifies the password for the SNMP community with read/write access.

Trap Destination Address: Specifies the IP address of the computer that will receive the SNMP traps.

Trap Destination Community Name: Specifies the password for the SNMP trap community.

SNMPv3: Enables or disables the SNMPv3 feature.

User Name: Specifies the username for SNMPv3.

Auth Protocol: Selects the authentication protocol type: MD5 or SHA.

Auth Key: Specifies the authentication key.

Priv Protocol: Selects the privacy protocol type: DES.

Priv Key: Specifies the privacy key for privacy.

Engine ID: Specifies the engine ID for SNMPv3.

Apply Save: Click **Apply Save** to apply the changes.

CLI Settings

CLI Setting

SSH Setting 	<input checked="" type="radio"/> Enable <input type="radio"/> Disable

Email Alert

You can use the Email Alert feature to send messages to the configured email address when particular system events occur.

Note: Do **NOT** use your personal email address as it can unnecessarily expose your personal email login credentials.
Use a separate email account made for this feature instead

Email Alert	
Status	<input checked="" type="checkbox"/> Enable
- From	<input type="text"/>
- To	<input type="text"/>
- Subject	[Email-Alert][ENSG20EXT][88:C]
Email Account	<input type="text"/>
- Username	<input type="text"/>
- Password	<input type="text"/>
- SMTP Server	<input type="text"/> Port: 25
- Security Mode	<input type="text"/> None
<input type="button" value="Send Test Mail"/> <input type="button" value="Apply"/> Apply saved settings to take effect	

CLI: The Command Line Interface (CLI) allows you to type commands instead of choosing them from a menu or selecting an icon.

SSH: Enable Secure Shell (SSH) to make secure, encrypted connections in the network. Secure Shell is a network protocol that allows data to be exchanged using a secure channel between two network devices.

HTTPS: Enable HTTPS to transfer and display web content securely. The Hypertext Transfer Protocol over SSL (Secure Socket Layer) is a TCP/IP protocol used by web servers to transfer and display web content securely.

From: Enter the email address to show the sender of the email.

To: Enter the address to receive email alerts.

Subject: Enter the text to appear in the email subject line.

Username: Enter the username for the email account that will be used to send emails.

Password: Enter the password for the email account that will be used to send emails.

SMTP Server: Enter the IP address or hostname of the outgoing SMTP server.

Port: Enter the SMTP port number to use for outbound emails.

Time Zone

Time Setting

This page allows you to set the internal clock of the AP.

Date and Time Settings

Manually Set Date and Time

Date: / /

Time: : (24-Hour)

Automatically Get Date and Time

NTP Server:

Manually Set Date and Time: Manually specify the date and time.

Synchronize with PC: Click this button to synchronize Date and time of this AP with the PC.

Automatically Get Date and Time: Select

Automatically Get Date and Time and check whether you wish to enter the IP address of an NTP server or use the default NTP server to have the internal clock set automatically.

Time Zone

Time Zone: ▾

Enable Daylight Saving

Start: ▾ ▾ ▾ ▾

End: ▾ ▾ ▾ ▾

Apply saved settings to take effect

Start: Select the day, month, and time when daylight savings time starts.

Enable Daylight Saving: Select the day, month, and time when daylight savings times ends.

Auto Reboot Settings

You can specify how often you wish to reboot the AP.

Auto Reboot Setting

Status	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
Timer	<input type="checkbox"/> Sunday <input type="checkbox"/> Monday <input type="checkbox"/> Tuesday <input type="checkbox"/> Wednesday <input type="checkbox"/> Thursday <input type="checkbox"/> Friday <input type="checkbox"/> Saturday
	0 : 0

Auto Reboot Setting: Enables or disables the Auto Reboot function.

Timer: Select the day and enter the time you would like to reboot automatically.

Save: Click **Save** to apply the changes.

Wi-Fi Scheduler

The Wi-Fi Scheduler can be created for use in enforcing rules. For example, if you wish to restrict web access to Mon-Fri from 3pm to 8pm, you could create a schedule Selecting Mon, Tue, Wed, Thu and Fri while entering a Start time of 3pm and End Time of 8pm to limit access to these times.

Wi-Fi Scheduler		
Status	<input type="radio"/> Enable <input checked="" type="radio"/> Disable	<small>NOTE: Please assure that the Time Zone Settings is synced with your local time when enabling the Wi-Fi Scheduler</small>
Wireless Radio	2.4GHz	
SSID Selection	Engenius330052_12.4GHz	
Schedule Templates	Choose a template	

	Day	Available	Duration
Schedule Table	Sunday	available	00 : 00 ~ 24 : 00
	Monday	available	00 : 00 ~ 24 : 00
	Tuesday	available	00 : 00 ~ 24 : 00
	Wednesday	available	00 : 00 ~ 24 : 00
	Thursday	available	00 : 00 ~ 24 : 00
	Friday	available	00 : 00 ~ 24 : 00
	Saturday	available	00 : 00 ~ 24 : 00

SSID Selection: Select a SSID from the drop-down list.

Schedule Templates: Select a schedule template from the drop-down list.

Day(s): Place a checkmark in the boxes for the desired days or select the **All Week** radio button to select all seven days of the week.

Duration: The Start Time is entered in two fields. The first box is for hours and the second box is for minutes. The End Time is entered in the same format as the Start time.

Status: Enables or disables the Wi-Fi scheduler function.

Wireless Radio: Select 2.4 GHz or 5 GHz from the drop-down list for the preferred band type.

Tools

Ping Test Parameters

This page allows you to analyze the connection quality of the AP and trace the routing table to a target in the network.

Ping Test Parameters	
Target IP / Domain Name	
Ping Packet Size	64 Bytes
Number of Pings	4
<input type="button" value="Start"/>	

Traceroute Test Parameters	
Target IP / Domain Name	
<input type="button" value="Start"/>	<input type="button" value="Stop"/>

Start Ping: Click **Start Ping** to begin pinging the target device (via IP).

Traceroute Target: Enter the IP address or domain name you wish to trace.

Start Traceroute: Click **Start Traceroute** to begin the trace route operation.

Start Ping: Click **Start Ping** to begin pinging the target device (via IP).

Traceroute Target: Enter the IP address or domain name you wish to trace.

Target IP: Enter the IP address you would like to search.

Ping Packet Size: Enter the packet size of each ping.

Number of Pings: Enter the number of times you wish to ping.

Speed Test Parameters / LED Control

This page allows you to implement speed test to realize the throughput of a target DUT.

Speed Test Parameters

Target IP / Domain Name		
Time Period	20	Sec
Check Interval	5	Sec
IPv4Port	5001	
IPv6Port	5002	
<input type="button" value="Start"/>		

Target IP / Domain Name: Enter an IP address or domain name you wish to implement a speed test for realizing the variance on wireless speed.

Time Period: Enter the time in seconds that you would like the test to implement for and in how many intervals.

IPv4/IPv6 Port: This Access Points uses IPv4 5001 and IPv6 5002 port for the speed test.

Start: Click start to implement speed test.

LED Control

This page allows you to implement speed test to realize the throughput of a target DUT.

LED Control

Power	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
LAN	<input checked="" type="radio"/> Enable <input type="radio"/> Disable

WLAN-5GHz	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
<input type="button" value="Apply"/> Apply saved settings to take effect	

Power: Enables or disables the Power LED indicator.

LAN: Enables or disables the LAN LED indicator.

WLAN-2.4 GHz: Enables or disables the WLAN-2.4 GHz LED indicator.

WLAN-5 GHz: Enables or disables the WLAN-5 GHz LED indicator.

Device Discovery

This page allows you to discover devices from network for Operation Mode, IP Address, System MAC Address and Firmware version.

Device Discovery

Device Name	Operation Mode	IP Address	System MAC Address	Firmware Version
<input type="button" value="Scan"/>				

Account

Firmware

This page allows you to change the AP username and password. By default, the username is: **admin** and the password is: **admin**. The password can contain from 0 to 12 alphanumeric characters and is case sensitive.

Account Settings

Account Settings

Administrator Username	<input type="text"/>
Current Password	<input type="password"/>
New Password	<input type="password"/>
Verify Password	<input type="password"/>

Firmware Upgrade
This page allows you to upgrade the firmware of the AP.

Firmware Upgrade

Current Firmware Version: 1.0.0
Select the new firmware from your hard disk.
<input type="file"/> <input type="button" value="Upload"/>

To Perform the Firmware Upgrade:

1. Click the **Choose File** button and navigate the OS file system to the location of the upgrade file.
2. Select the upgrade file. The name of the file will appear in the Upgrade File field.
3. Click the **Upload** button to commence the firmware upgrade.

Note: The device is unavailable during the Firmware upgrade process and must restart when the upgrade is completed. Any connections to or through the device will be lost.

Verify Password: Re-enter the new password in the Confirm Password entry box for confirmation.

Apply: Click **Apply** to apply the changes.

Backup/Restore

This page allows you to save the current device configurations. When you save your configurations, you also can reload the saved configurations into the device through the Restore Saved Settings from a file section. If extreme problems occur, or if you have set the AP incorrectly, you can use the **Reset** button in the Revert to Factory Default Settings section to restore all the configurations of the AP to the original default settings.

Backup Setting: Click **Export** to save the current configured settings.

Restore New Setting: To restore settings that have been previously backed up, click **Browse**, select the file, and click **Restore**.

Restore to Default: Click **Reset** button to restore the AP to its factory default settings.

Backup/Restore Settings

Factory Setting	Export	Import
- Backup Setting	選擇檔案 未選擇任何檔案	
- Reset to Default	Reset	
User Setting	Backup	Restore
- Back Up Setting as Default		
- Restore to User Default		

- Caution: Please write down your account number and password before saving. The user settings will now become the new default settings at the next successful login.

User Setting

The function allows you to backup the current device configurations into the AP as the default value. If extreme problems occur, or if you have set the AP incorrectly, you can push the Reset button to revert all the configurations of the AP to the user default.

Back Up Setting as Default: Click **Backup to backup** the user settings you would like to the device's memory for the default settings.

Restore to User Default: Click **Restore** to restore user settings to the factory standard settings.

Note1: After setting the current settings as the default, you should click the **Restore to Default** on the web interface for reverting the settings into the factory default instead of pushing the reset button.

Note2: Please **write down** your account and password before saving. The user settings will now become the new default settings at the next successful login.

Log

System Log

The AP automatically logs (records) events of possible interest in its internal memory. To view the logged information, click the **Log** link under the System Manager menu. If there is not enough internal memory to log all events, older events are deleted from the log. When powered down or rebooted, the log will be cleared.

Appendix

Appendix A

Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

FCC Caution:

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

IMPORTANT NOTE:

Radiation Exposure Statement

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with a minimum distance of 20 cm between the radiator & your body.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter. Operation of this device is restricted to indoor use only.

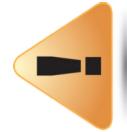

Appendix B - IC Interference Statement

Industry Canada Statement

This device complies with RSS-247 of the Industry Canada Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Ce dispositif est conforme à la norme CNR-247 d'Industrie Canada applicable aux appareils radio exempts de licence. Son fonctionnement est sujet aux deux conditions suivantes: (1) le dispositif ne doit pas produire de brouillage préjudiciable, et (2) ce dispositif doit accepter tout brouillage reçu, y compris un brouillage susceptible de provoquer un fonctionnement indésirable.

Caution:

- (i) the device for operation in the band 5150-5250 MHz is only for indoor use to reduce the potential for harmful interference to co-channel mobile satellite systems;
- (ii) high-power radars are allocated as primary users (i.e. priority users) of the bands 5250-5350 MHz and 5650-5850 MHz and that these radars could cause interference and/or damage to LE-LAN devices.
- (iii) Users should also be advised that high-power radars are allocated as primary users (i.e. priority users) of the bands 5650-5850 MHz and that these radars could cause interference and/or damage to LE-LAN devices.

Avertissement:

- (i) les dispositifs fonctionnant dans la bande 5150-5250 MHz sont réservés uniquement pour une utilisation à l'intérieur afin de réduire les risques de brouillage préjudiciable aux systèmes de satellites mobiles utilisant les mêmes canaux;
- (ii) De plus, les utilisateurs devraient aussi être avisés que les utilisateurs de radars de haute puissance sont désignés utilisateurs principaux (c.-à-d., qu'ils ont la priorité) pour les bandes 5250-5350 MHz et 5650-5850 MHz et que ces radars pourraient causer du brouillage et/ou des dommages aux dispositifs LAN-EL.
- (iii) De plus, les utilisateurs devraient aussi être avisés que les utilisateurs de radars de haute puissance sont désignés utilisateurs principaux (c.-à-d., qu'ils ont la priorité) pour les bandes 5650-5850 MHz et que ces radars pourraient causer du brouillage et/ou des dommages aux dispositifs LAN-EL.

FOR MOBILE DEVICE USAGE

Radiation Exposure Statement

This equipment complies with IC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with a minimum distance of 20cm between the radiator & your body.

Pour l'utilisation de dispositifs mobiles)

Déclaration d'exposition aux radiations:

Cet équipement est conforme aux limites d'exposition aux rayonnements IC établies pour un environnement non contrôlé. Cet équipement doit être installé et utilisé avec un minimum de 20cm de distance entre la source de rayonnement et votre corps.

Appendix C - CE Interference Statement

Europe - EU Declaration of Conformity

This device complies with Directive 2014/53/EU issued by the Commission of the European Community.

-Declaration of Conformity

Please added certification standard in your user manual which depended on the test standards your device performed or

- If the DoC should be a simplified version, please take below as reference –

Hereby, EnGenius Networks declares that the EWS550AP/EWS510AP/EWS511AP are in compliance with Directive 2014/53/EU.

The full text of the EU declaration of conformity is available at the following internet address:
