

CONTROLLER / PROGRAMMER

URC-100

The **URC-100 controller/ programmer** is an external manipulator which enables correct programming of **WWK-9NG, WWK-IQ USB, SWK-9216** devices. Access to the whole menu of these devices is possible only with the controller.

The programmer allows communication with and configuration of dedicated TELKOM-TELMOR devices. It also enables firmware upgrade and writing/ reading in/from external USB memory of the total settings.

Connect the URC-100 with the device using a USB cable (included). Then start programming according to the URC-100 manual. Green LED on indicates communication with the device and that its menu and current settings are accessible from the programmer. All modifications made on URC-100 (while the green LED in on) are simultaneously entered to the device.

The **URC-100** has also an RJ-45 connector for remote communication with the controlled device.

- controller/ programmer recognizes the device to which it is connected
- retrieves menu and configuration from connected device, e.g. SWK-9216, WWK-IQ USB, WWK-9NG
- settings can be performed online or offline

TECHNICAL PARAMETERS

TYPE		URC-100
Connector	/	USB A, USB mini, 9VDC, RJ45
Cooperates with devices	/	WWK-9NG, WWK-IQ USB, SWK-9216
USB A current capacity	mA	300
Dimensions	mm	10.7 x 67.4 x 19.5
Weight	kg	0.2
Packaging	/	cardboard box

Technical parameters are subject to change without prior notice.
